

Caribbean Studies notes

Module 1 Caribbean society and culture

Location of the Caribbean

Greater Antilles: Cuba, Hispaniola (Haiti and Dominican Republic), Jamaica, Puerto Rico

Lesser Antilles:

- *Windward islands*: Grenada, St. Vincent, St. Lucia, Guadeloupe, Dominica, Martinique
- *Leeward islands*: Antigua and Barbuda, St. Kitts-Nevis, Montserrat, Anguilla, Virgin islands

Netherland Antilles: Aruba, Bonaire, Curacao (ABC" islands); Saint Marten, Saba, St. Eustatius

Mainland Territories: Guyana, Belize, Suriname, Cayenne (French Guyana)

Others: Barbados, Trinidad & Tobago, Cayman Islands, Bahama Islands, Turks and Caicos Islands

B. *DEFINITIONS OF THE CARIBBEAN REGION*

The Caribbean is a disjunct land bridge between North and South America with an East - West stretch of almost 3000 Km and a North -South reach of some 1500 Km. Only 10% of this is land. Geographically the Caribbean is defined as the land area which has its coastline washed by the Caribbean Sea. This would mean that the Greater and Lesser Antilles, the Cayman Islands and the islands of the Netherland Antilles all belong to the Caribbean. By this definition Turks and Caicos Islands and the Bahamas would however be excluded from the Caribbean. It would also include Belize, Colombia, Venezuela, Costa Rico; Panama, Nicaragua and Honduras and exclude the mainland territories of Suriname, Guyana and French Guiana (Cayenne).

This is the area colonized by European powers (Spanish, British, French and Dutch) and which has been deeply affected by the brand of European Colonialism. The Spanish through the encomienda system and other means exterminated the original inhabitants. The British introduced the plantation system and with it, the enslavement of Africans and the indentureship of the Chinese and East Indians. The Dutch and French not only colonized but were involved in an ongoing trade within the region. It has become common way to identify the Caribbean based on the experience of specific European colonialism. Within this historic; context has arisen a multiracial society with marked social stratification and racial hybridization.

GEOLOGICAL CARIBBEAN

The Caribbean is seen as that area of the region defined by the Caribbean Plate and which therefore experiences the same tectonic, seismic and volcanic features and processes. The lands of the Caribbean are said to be formed from earth movements called **Plate Tectonics**. In the Caribbean about 140 million years ago the smaller **Caribbean plate** moved under the North American plate to be re-melted in the earth's mantle causing volcanic activities and consequently the formation of the Greater and Lesser Antilles. The islands in this Caribbean chain are believed to be the **tops of submerged mountains** linked to **the** Andean mountain range in Central America, There is **a** rich variety of landscape features in the Caribbean as a result of the structure of the islands and mainland's.

All the **mainland territories** of the region have high mountain ranges, large rivers and vast areas of lowland. There are volcanic peaks in the ranges, crater lakes high up in the mountains, swamps and lagoons. With the exception of Cuba, all the continental **islands** of the Greater Antilles are mountainous. Cuba has wide elevated plains (plateaus) over 1000m in altitude. The mountain ranges restrict settlement and present transportation difficulties. Many

of them however have valuable minerals deposits. Most of the Caribbean mountain ranges are joined to those of Central America. In the Greater Antilles there are also many low-lying alluvial plains and steep limestone hills with caves. The rivers on these plains are not very large and many disappear underground.

The smaller volcanic islands of the Eastern Caribbean are also rugged and mountainous. Volcanic eruptions have occurred on some of these islands in the past (Mt Pelee). Recently there have been eruptions in St Vincent and Montserrat. These eruptions have caused much damage to surrounding settlements. Hot springs, crater lakes and fumerole; are the only evidence of past volcanic activity in some islands. Over the years the steep slope: of some of these mountains have been changed by the work of the sun, wind, rain and running] water (weathering and erosion). Volcanic islands have a good water supply and deep fertile soils. The rugged mountains, narrow valleys and swift flowing streams make beautiful scenery. The Limestone islands are built up from the skeletal remains of coral polyps in the warm Caribbean Sea. These islands are flat with no large rivers and very few lakes. Soils on limestone rock lack depth and are mostly infertile. Some of the limestone islands like Barbados are raised high above sea level. Many small ones, as those found in the Bahamas, are just at sea level. There is no great variety of scenery in limestone islands.

iv. *Political Caribbean*

Politically there is very little coordination within the region (except CAR1COM and French Department). Three kinds of governmental systems exist: independent states, associated states and colonial dependencies. Several of the former colonial powers still possess territories in the Caribbean or have very close relations with them. Guadeloupe, Martinique and French Guyana are so called "de-partementes d'outre-mef" and thus are pa of France's sovereign territory and part of the E.U.; Anguilla, British Virgin Islands, Cayman Islands, Montserrat and Turks and Caicos are still British crown colonies; Aruba, Bonaire, Curacao, Saba, Saint Marten and St Eustatius are dependencies of the Kingdom of the Netherlands and Puerto Rico is associated with the USA.

In terms of political arrangements, Cuba has a communist system, Puerto Rico is annexed to the USA, Guyana and Trinidad and Tobago are republics. The rest of the one British W.L still hold to the British traditional form of government, based on the Westminster

- Whitehall model. By and large the Caribbean has a rich post colonial democratic tradition with a few exceptions of Cuba, Dominican Republic and Haiti.

Independent States

\</^ Associated States

Dependencies

2 *Characteristics of society*

A **Society** is the largest unit or group to which an individual belongs. To the layman society is usually understood to mean a collection of persons, living in the same **geographical area** with which one feels a sense **of belonging** (similar cultural background and who live in a specific geographical area.) The limits of the state, (be it an island surrounded by water or mainland territory bordered by other states) often act as the geographic border of the society and members are usually citizens. To the sociologist who is involved in the systematic study of society, the important aspect in defining society is its group structure framework. Each society has a social structure - that is a network of interrelationships among individuals and groups. Sociologists study these various relationships in order to determine their effects on the overall function of the society. Many elements determine the general social conditions of a society, these elements can be classified into five major areas (1) population characteristics (2) social behaviour (3) social institutions (4) cultural influences and (5) social change

Population characteristics determine the general social patterns of a group of people living within a certain geographical area. There are two chief kinds of population studies, demography and human ecology. Demography is the systematic study of the size, composition and distribution of human populations. Demographers compile and analyze various studies, including people's age, birth and death rates, marriage rates, ethnic background and migration patterns. Many demographic studies explain the effects of social conditions on the size and composition of a population. For example, several studies of the 1900's found a direct correspondence between the growth of science, medicine and industry and a decline in the death rate. Human ecology on the other hand deals mainly with the structure of urban environments and their patterns of settlement and growth. Studies in human ecology explain why and how cities and other communities grow and change.

Social Behaviour is studied extensively in the field of sociology. Social psychologist usually work with small groups and observe attitude change, conformity, leadership morale and other forms of behaviour. They also study social interaction which is the way members of a group respond to one another and to other groups. In addition, sociologists examine the

results of conflicts between groups such as crime, social movement and war. In most societies standard of behaviour are passed on from one generation to the next. Sociologists and psychologists observe how people adjust their behaviour to conform to these standards (a process called **socialization**). Sociologists also study **social roles** (the function or expected behaviour of an individual within a group) and status (a person's importance or rank). Social Institutions are organized relationships among people which tend to perform specific **function** within the society. These institutions include business organizations, churches, government, security forces, hospitals, family and schools. Each institution, has a direct effect on the society in which it exists. For example, the attitudes and the goals of an entire society are influenced by the transmission of learning and knowledge in educational institutions. Some branches of sociology study the influence of one particular type of institution. These branches include the sociology of the family and the sociology of law. Sociologists also study relationships among institutions. For example, sociologists try to discover whether distinct types of social classes and governments are associated with particular systems of economic production.

I. Characteristics of culture

The term culture has been defined in many ways. It is often used in a narrow sense to refer to activities in such fields as Art, Literature and Music. In that sense a cultured person someone who has knowledge of and appreciation for the fine arts. But under the broader definition used by social scientists, culture includes all areas of life and therefore every human society has a culture. Culture includes a society's arts, beliefs, customs, institutions, inventions, language, technology and values. Culture produces similar behaviour and thought among most people in a particular society.

People are not born with any knowledge of a culture. They generally learn a culture by growing up in a particular society. They learn mainly through the use of language especially by talking and listening to other members of the society. They also learn by watching and imitating various behaviours in the society. The process by which people learn their society's culture is called ENCULTURATION. Through enculturation, a culture is shared with members of a society and passed from one generation to the next. Enculturation unifies people of a society by providing them with common experiences. Social scientists identify certain aspects of culture as POP CULTURE or POPULAR CULTURE. Pop culture includes such elements of a society's arts and entertainment as television, radio, recordings, advertising, sports, hobbies,

fads and fashions. There are several important characteristics of culture. The main ones are (1) a culture satisfies human needs in a particular way (2) a culture is acquired through learning (3) a culture is based on the use of symbols (4) a culture consists of individual traits and groups of traits called patterns. All cultures serve to meet the basic needs shared by human beings. For example, every culture has methods of obtaining food and shelter. Every culture also has family relationships, economic and governmental systems, religious practices and forms of artistic expression. Each culture shapes the way its members satisfy human needs. Human beings have to eat but their culture teaches them what, when and how to eat. E.g. many British people eat smoked fish for breakfast but many Americans prefer cold cereals. In the Mid Western US, people generally eat dinner at 5/6 p.m. but most Spaniards dine at 10 p.m., many Turks prefer strong coffee with grounds (dregs) left in the cup, but most Australians filter out the grounds for a weaker brew. Many Japanese eat their meals from low tables while sitting on mats on the floor. Canadians usually sit on chairs at higher tables.

Culture is acquired through learning not through biological inheritance.-That is, no person who is born with a culture. Children take on the culture in which they are raised through enculturation. Children learn much of their culture through imitation and experience. They also acquire culture through observation, paying attention to what goes on around them and seeing examples of what their society considers right and wrong. Children may also absorb certain aspects of culture unconsciously. For example, Arabs tend to stand closer together when speaking to one another than most Europeans do. No one instructs them to do so, but they learn the behaviour as part of their culture. Children also learn their culture by being told what to do. For example, a parent tells a son/daughter, 'say good morning,' 'thank you' 'don't talk to strangers'. Individual members of a particular culture also share many . memories, beliefs, values, expectations and ways of thinking. In fact, most cultural learning results from verbal communication. Culture is passed from generation to generation chiefly through language. Cultural learning is based on the ability to use symbols. A symbol is something that stands for something else. The most important types of symbols are the words of a language. There is no obvious or necessary connection between a symbol and what it stands for. The English word "dog" is a symbol for a specific animal that barks. But other cultures have a different word that stands for the same animal, "mbwa" (Swahili), "perro" (Spanish) "dawg" (Jamaican). There are many other kinds of symbols besides the words in a language. A flag, for example, stands for a country. In China, white is a colour of mourning while in western societies it is black. All societies **use** symbols to create and maintain culture.

Cultures are made up of individual elements called **cultural traits**. A group of related traits or elements is a **cultural pattern**. Cultural traits may be divided into **material culture** or nonmaterial culture. Material culture consists of all the tangible things that are made by the members of a society. It includes such objects as (architectural styles) buildings, jewellery, machines, cuisine, forms of technology, economic organization, paintings and artistic creations. Nonmaterial culture refers to a society's norms, beliefs, superstitions and values that guide their behaviour. A handshake, a marriage ceremony and a system of justice are examples of nonmaterial culture. Cultural patterns may include numerous traits (both material and non material). The pattern for agriculture for example includes the time when crops are harvested (nonmaterial) the methods (nonmaterial) and machines (material) used in harvesting and the structures for storing the crops (material). Most traits that make up a cultural pattern are connected to one another. If one custom, institution or value, that helps to form a cultural pattern, changes other parts of the pattern will probably change too. For example until the 1950's the career pattern for most women in western societies was to work full time as home makers and mothers. By the late 1900's the pattern was for most women to get jobs outside the home. As part of the new pattern, attitudes about marriage, family and children also changed. The new pattern includes marriage at a later age than ever before, a dependence on alternative child care systems and more frequent divorce. People who grow up in the same nation can be said to share a national culture. But they may be part of other societies within the nation that have separate cultural traditions. Social scientists sometimes use the term SUBCULTURE to describe variations within a culture. Social groups often develop some cultural patterns of their own that set them apart from the larger society of which they are a part. Subcultures may develop in businesses, ethnic groups, occupational groups, regional groups, religious groups and other groups within a larger culture e.g. Maroons in Jamaica. Many cultural traits and patterns are limited to a particular culture but many others are common to more than one culture. For example, cultures in the same part of the world often have similar patterns. A geographical region in which two or more cultures share cultural traits and patterns is called a CULTURAL AREA. Northern Europe is an example of a culture area. Some cultural traits have spread throughout the world. For example some clothing, music, sports and industrial processes are the same in many areas of the world. Cultural traditions that extend beyond national boundaries form what is called INTERNATIONAL CULTURE. For example, countries that share an international culture include Australia, Canada, the United Kingdom and the United States. Their common cultural traditions include the English Language and a heritage of British founders.

Multiculturalism/Pluralism . Some societies have traditionally been associated with a single

culture'(Pacific Islands) while other societies are multicultural societies (USA) because they include many distinct cultures. A multicultural society supports the view that many distinct cultures are good and desirable and so they encourage such diversity. Thus in the United States, millions of people speak both English and the language of their culture. They eat both American food (apple pie, hamburger) as well as their ethnic food. They celebrate both national holidays (4^m July and Thanksgiving) and their ethnic holidays. For example, many Mexicans Americans celebrate Mexican Independence day (16th Sept). In Chinese communities across the country, parades and other festivities mark the Chinese New Year. Multiculturalism succeeds best in a society that has many different ethnic groups and a political system that promotes freedom of expression and awareness and understanding of cultural differences. Ethnic groups can bring variety and richness to a society by introducing their own ideas and customs. A shared cultural background makes people feel more comfortable with others from their own culture. Many people initially may feel confused and uneasy when they deal with people of another culture. The discomfort that people often feel when they have contact with an unfamiliar culture is called CULTURE SHOCK. Cultural shock usually passes if a person stays in a new culture long enough to understand it and get used to its ways. People of one culture who move to a country where another culture dominates may give up their old ways and become part of the dominant culture. The process by which they do this is called ASSIMILATION. Through assimilation, a minority group eventually disappears because its members lose the cultural characteristics that set them apart. In a multicultural society however assimilation does not always occur. However, ethnic groups which keep their own values and traditions can also threaten national unity. In many parts of the world conflicts often erupt with neighbouring ethnic groups which dislike and distrust one another. In some cases, these feelings have even led to war (Shiites and Sunnis in Iraq). Many people in all cultures think that their own culture is right, proper and moral. They tend to use their own cultural standards and values to judge the behaviours and beliefs of people from different cultures. They regard the behaviour and beliefs of people from other cultures as strange or savage. This attitude is called ETHNOCENTRISM. Ethnocentrism is harmful if carried to extremes. It may cause prejudice, automatic rejection of ideas from other cultures and even persecution of other groups. The opposite view of ethnocentrism is called CULTURAL RELATIVISM. It contends that no culture should be judged by the standard of another. This view can also present problems if carried to extremes. An extreme cultural relativist would say there is no such thing as a universal morality. An extreme cultural relativist would argue that the rules of all cultures deserve equal respect, even

rules that allow such practices as cannibalism and torture. But many social scientists would reply that certain values are common to all societies - a prohibition against incest, and support for marriage.-They would argue that international standards of justice and morality should not be ignored. Culture is not static; it changes with time and events although all parts of a culture do not change at the same time. For example science and technology may sometime change so rapidly that they lessen the importance of customs, ideas and other nonmaterial parts of a culture. At other times changes in ideas and social systems may occur before changes in technology. The failure of certain parts of a culture to keep up with other, related parts is referred to as cultural lag. A number of factors may cause a culture to change. The two main ones are (1) contact with other cultures and (2) invention. No society is so isolated that it does not come in contact with other societies. When contact occurs, societies borrow cultural traits from one another. As a result, cultural traits and patterns tend to spread from the society in which they originated. This spreading process is called DIFFUSION. Diffusion can occur without firsthand contact between cultures. Products or patterns may move from A to C through B without any contact between A and C. Today diffusion is rapid and widespread because many cultures of the world are linked through advanced means of transportation and communication. When two cultures have continuous firsthand contact with each other, the exchange of cultural traits is called ACCULTURATION. Acculturation has often occurred when one culture has colonized or conquered another or as a result of trade. In addition to adopting each other's traits, the two cultures may blend traits, e.g. If the people of the cultures speak. Social Change is any significant alteration in the social conditions and patterns of behaviour in a society e.g. replacement of an elected president by a dictator (there would be a change in the structure of government) Such a change may be caused by fashions, inventions, revolutions wars or other events and activities. Technological developments have led to many social changes during the 1900's. A number of sociological studies have concentrated on the changes in education, social values and settlement patterns that occur in newly industrialized nations.

There are four main types of social change:

- change in the number and variety of positions and roles
- change in obligation or duties attached to positions
- .new ways of organizing social
- the redistribution of facilities and rewards such as power, education

Changes can take pace gradually or suddenly and can result from deliberate planning as well as it could be unintentionally. These changes can be beneficial to some as well as punitive to others and as such it is inevitable that there will be resistance to some changes

To a large degree, culture determines how members of a society think and feel; it directs their actions and defines their outlook on life. Members of society usually take their culture for granted, it has become so much a part of them that they are often unaware of its existence. Culture defines accepted ways of behaving for members of a particular society. Such definitions vary from society to society. This can lead to considerable misunderstanding between members of different societies. Every society has certain common problems to deal with and the solutions to them are culturally determined; they vary from society to society. The solution offered in one society may be indefensible in another e.g. culture of Islamic countries to theft as compared to ours. Every culture contains a large number of guidelines that direct conduct in particular situations. Such guidelines are known as norms. A norm is a specific guide to one's action which defines acceptable and appropriate behaviour in a particular situation e.g. norms governing dress code on what to wear for formal/informal functions, funeral, wedding. Norms are enforced by positive and negative sanctions i.e. rewards and punishments. Sanctions can be informal such as a disapproving or approving glance or formal such as a reward or a fine by an official body. Certain norms are formalized by translation into laws which are enforced by official sanctions e.g. streaker appearing nude in public. Unlike norms, which provide specific directives for conduct, values provide more general guidelines. A value is a belief that something is good and desirable. It defines what is important, worthwhile and worth striving for. Our values represent how strongly we feel about certain qualities. Our cultural value is really how we rank the importance of these qualities within our culture, e.g. hospitality, kinship support, informality, family as a support system etc; It has become accepted that individual achievement and materialism are major values in western industrial societies. Thus an individual believes it is important and desirable to come top of the class, to win a race or reach the top of their chosen profession. Like norms values can be seen as an expression of a single value - the value placed on human life in western society is expressed in terms of the following norms: hygiene in the home, rules and regulations dealing with transport. Sociologists maintain that shared norms and values are essential for the operation of human society. Unless some norms are shared members of society would be unable to cooperate with or even comprehend the behaviour of others. Similar arguments apply to values. Without shared values, members of society would be unlikely to cooperate and work together. Thus an ordered and stable society requires shared

norms and values. Within the Caribbean these cultural values are manifested in behaviour typical of our region. These include: achievement, material success, migration, gender roles, celebrations, insularity/mitigation, hospitality/friendliness, foreign tastes/products, and work ethic, food, race/colour and kinship/family ties.

All members of society occupy a number of social positions known as statuses. In society an individual may have several statuses - occupational, family, gender. Statuses are culturally defined despite the fact that they may be based on biological factors such as sex. Some statuses are relatively fixed/ascribed and there is little an individual can do to change their assignment to a particular social position - race, gender, aristocratic titles. Statuses that are not fixed by inheritance, biological characteristics or other factors over which the individual has no control are known as achieved statuses. All achieved status is entered as a result of deliberate action or choice e.g. marital status and occupational status. Each status in society is accompanied by a number of norms that defines how an individual occupying a particular status is expected to act. This group of norms is known as role. Social roles regulate and organize behaviour. In particular they provide means for accomplishing certain tasks.

3. *Characteristic of Caribbean society and culture*

A. Diversities

In order to define Caribbean culture one must bear in mind the population make up each territory and its culture. Within the region there are some cultural differences. In most instances a particular culture which is indigenous to an island/country diffuses to other Caribbean countries. Furthermore Caribbean countries acculturate each other's culture which gives rise to a mixed culture. Within each culture there are some defining characteristics which are similar to many countries.

This is due to the shared historical experiences as well as the environmental factors exemplified within the Greater Antilles. These include their 'discovery' by Columbus and the later arrival of the French and English, the destruction of their aboriginal societies, slavery, indentureship and then the straggle for independence. Within this melee was the introduction of European agricultural capitalism based on sugar cane cultivation, African labour and the plantation system. Within the plantation system developed an insular social structure in which there was sharply differentiated access to land, wealth and political power and the use of physical differences as status markers. These experiences have effectively created multi racial societies with mixed culture and a social stratification based on race, education and wealth.

There are of course similarities as there are differences. Jamaica is the only one in 1 group (Greater Antilles) that had British colonization and, similar to Haiti, a predominantly black population in excess of 90%. Cuba, Dominican Republic and Puerto Rico were Spanish colonies. Spanish is their primary language and they have a more balanced racial mix between blacks and European descendants. All these territories have dialects due to racial mixes and the need to communicate. Cuba is the only communist territory in the region and the only one where the strong religious heritage is not encouraged. The Spanish speaking territories have tended to embrace Roman Catholicism while in the British dominated territories the Church of England (Anglican) and to a lesser extent Methodists have had influence. It was the Baptists in Jamaica that the slaves were able to identify with mostly and this attraction later led to the development of the evangelical movement.

In all these territories, food types are somewhat different as a result of racial mix and colonial experience. While some types of foods were here before the Tainos, they and other ethnic groups who came, brought with them different types of food. So what we eat today in these territories are as a result of this cultural evolution. Only the Africans, by large were not able to bring food with them due to their mode of travel through the Middle Passage. They however found some common staples that they were used to and developed new menu over time with the new foods to which they were introduced, in the Caribbean we like to eat and drink and have a good time. In Jamaica for example on Sundays we eat rice and peas and chicken. We also enjoy curried goat, boiled bananas, rice and dumplings as well as the national dish (ackee and saltfish introduced as food for slaves). Being islands, these countries continue to have a vibrant fishing industry and so sea food is a common item on menus in these territories. The Tainos brought cassava, corn, possibly pineapple and sweet potato, various beans and water cress. They also brought hot peppers, chocolate, sweet basil, pimento and annatto, tomato, sweet pepper, peanuts and pear. The Amerindians had cultivated most of these in South America and so they brought them along. The Spaniards brought cattle, pigs, chickens, plantain and bananas, sugar cane and citrus (lemons, oranges and limes). They also introduced escoveitch fish. The English brought the making of buns, cheese, the use of ham, bacon, sausages, some wines, ale, stout and beer. They developed the making of rum. The English also introduced imported wheat flour, salt fish, salt beef and salt pork from Canada and USA. Within the LESSER ANTILLES islands like Barbados and Antigua have similar racial mixes as Jamaica and other British colonies. The past and present association of Caribbean territories with different metropolitan powers are clearly important for comparative analysis. Present effects of previous association rule out the treatment solely in terms of the contemporary distribution of territories among British Americans, French or Dutch. American St Thomas still reveals the influences of its former masters, the Danes. Within the British Caribbean islands such as Trinidad, Grenada, Dominica and St. Lucia differ as a group from certain other territories by their continuing affiliation to Catholic tradition — a pattern laid down in earlier days by French or Spanish masters.

The St. Lucian folks probably have more in common linguistically with French ... colonies in terms of their present association with metropolitan powers. We must therefore keep in mind present cultural variations and continuities within and across these divisions which reflect historical factors of various kinds. Within the British colonies the main distinction reflects differences of racial population ratios and composition, Protestant or Catholic affiliation; insularity or its opposite. Together with the Caribbean colonies of other nations, these British territories share a multiracial composition, (from which Amerindian elements are largely absent) dependence on agriculture, low levels of urbanization and low urban ratios.

On the **mainland territories** such as Guyana, there is a strong East Indian population

(51%) which co-exists alongside a strong black population (45%). The East Indians have been particularly noted for their insular culture and do exert influences on these societies. The Chinese are particularly noted, in the countries that they went as indentured servants for their industriousness in establishing small groceries and supermarkets after their period of indentureship. They too have tended to have an insular culture and have remained distinct ethnic groups in the societies that they live. Belize and Suriname have a more significant Amerindian element in their population and so blacks are not dominant. They represent large influx of indentured labour of Europeans and Asians. So here again the culture will be subject to ethnic cultures and sub-cultures.

Music and cultural expressions continue to be very popular in the Caribbean from folk music, hymns, reggae and calypso to soul and salsa. We can therefore conclude that the Caribbean is not a homogeneous culture but a multi or diverse culture, based on ethnic origin and Caribbean historical process. Within this context erasure and retention are prevalent more so among Africans than any other ethnic group. The Caribbean continues to display an interplay of small scale agriculture and peasantry with plantation like structure. While there has been attempt at diversification the Caribbean is still predominantly agriculturally based. Hence the attitude of the WTO ruling recently has greatly affected the future of small Caribbean Islands. In all of this however there have been exceptions. Trinidad has developed its petroleum industry and this has aided its economic growth and consequently increased expenditures on social services such as health and education.

Common to all Caribbean territories have been the effect of the media and trade link with other countries especially USA. In addition the Caribbean countries have fairly buoyant tourist trade which has further impacted on the way of life of the people of the region. This has taken the form of dress, language, business culture, music, food education, religion, me technology and even politics. Puerto Rico is an annex-state of the USA so it has been directly influenced by the US culture: The Bahamas on the other hand uses the US dollar, its second currency and with little agriculture, its economy is based predominantly on tourism and offshore banking. Most Bahamian shop in Florida, USA and while there is retention of culture in terms of food and social structures, the society reflects strong US influence on their present culture.

The legacy of the historical processes that the region has undergone is more pronounced in those territories where there has been relatively low economic growth in recent years. Examples of this situation can be found in Jamaica, Haiti and Guyana. All of these territories have a heavy dependence on agriculture and reflect a degree of individualization and sharp social stratification based on education, colour and wealth. The politics of these territories display a high degree of political party support. They

show a readiness to fight for the scarce benefits that the state has to offer. This poor economic performance leads to increase poverty and social discontent. Most Caribbean territories however see a legacy structure that reflects evidence-of ethnic origin in one part but erasure in the other. 'The region by large displays an extended family culture, promiscuous lifestyle of men, high teenage pregnancy and consensual unions. Also the concept of godparents still exists though not as popular. This reflects retention of the African tradition such as nine nights celebrations, community involvement in funerals and tomb buildings. Labour Day and work day projects are still features of the region particularly where there is strong African heritage.

The region also continues to have the view that light skinned people are more beautiful than afro-Caribbean people as reflected by beauty pageants and advertisements. One of the emerging realities of the Caribbean commonality is that its young people are slowly losing their sense of nationalism or regionalism. They are primarily attracted to the North American way of life. Many see education as the path to social mobility or for some to be successful business people

Positive Impacts of diversity

- add richness to region's society
- exposure to multiculturalism
- recognition and appreciation of other people's lifestyle
- basis for growth into tourism product
- creates strong patriotism
- learn to do things differently
- gives awareness of cultural heritage

Negative effects of diversity

- √ creates insularity/narrow mindedness
- √ ethnocentrism arises
- √ impedes communication - different languages and dialects
- √ animosity .
- √ strong patriotism to the point where objectivity is lost
- . √ dominant culture displaces cultural traits of smaller nations

Ethnic and cultural differences do exist but is more prevalent in Guyana and Trinidad where there is a strong African (31 %, 41 % respectively) and East Indian (51 %, 31 % . respectively) population. Economic power is vested in the Indian community. This can lead, to unrest/rebellion, racist practices, isolation and ethnocentrism. In Jamaica the difference is not so much along ethnic lines (grouping according to common traits and customs) as it is along stratification based on class (upper, middle, lower) and skin colour. These differences have created a false value system among Jamaicans. Those of darker shade want to achieve lighter complexion as well-as straighter hair.

Thus Caribbean society characterised by hierarchy of groups such as Trinidad and Tobago; St. Kitts and Nevis; St Vincent and the Grenadines. For the smaller 'partners' there is understanding that their societies are distinct in terms of their separateness from their larger members. The island usually determines the extent to what an individual/citizen thinks of as his/her society e.g. Jamaica, Antigua etc

- In mainland territories the presence of language groups in neighbouring countries serves to reinforce and delimit the borders of these societies.
- There is the movement to recognize the wider Caribbean as the limit of Caribbean society CARICOM ties.

• **B. Social stratification**

This refers to a system whereby society ranks categories of people in a hierarchy of classes (upper, middle and lower class) based on criterion or a combination such as religion, colour, race, wealth, age, sex, occupation, education, language, geographical area, membership in social club. It represents the structured inequality characterized by groups of people with differential access to the rewards of society because of their relative position in the social hierarchy. It ranks some people as more deserving of power, wealth and prestige than others and as such they are treated differently depending on where their social position lies in the overall hierarchy.

The sources of the stratification the Caribbean include race, age, ethnicity, gender, sex. The categorizing by race is a social phenomenon rather than a biological one: It is society that categorizes people into races based on physical characteristics. Ethnicity refers to a population known and identified on the basis of their common language, nationality, culture. Gender stratification refers to those differences between men and women that have been acquired or learned and hence to the different roles and positions assigned to males and females in a society - hairstyle, clothing family and occupational roles; Across society women have been systematically denied certain rights and opportunities based on assumptions regarding their abilities: Age

stratification refers to the ways in which people are treated differently depending on their ages. This stratification is concerned with the attitudes and behaviour we associate with age and to the different roles and statuses we assign to people depending upon their ages.

Within the Caribbean society, stratification is as a result of the plantation system which existed in the West Indies during the period of slavery. The society was rigidly stratified by race, and colour; directly correlated with occupational status without any kind of social mobility. White planters and administrators stood, at the top with slaves firmly at the bottom. In between these two ranks were the skilled whites. Emerging from among the blacks was a racial and cultural half caste (coloured). This group was more privileged than pure blacks and frequently made up the staff of house servants; Slavery was a closed system of social stratification because one could not change the basis or the category that made one a slave-race (ascribed status). After emancipation, education opened opportunities for ex-slaves but this only served to expand ranks of the middle group rather than effect any change in the general social structure. As a result, social mobility depended on how successful blacks were to assimilating the culture of the whites. This set the stage in the process-whereby black people sought social mobility by aspiring to a European way of life: education, manners of dress and speech, residence, religious belief and practices, social values and attitudes and general lifestyle. This served to distinguish blacks who had "made it" from those who had not.

Today traces of stratification by colour and race can still be found e.g. white persons can predictably be expected to be in the upper classes of society. Stemming from miscegenation a continuum of colour exists in Caribbean societies. As a result of the plantation legacy light or dark skin colour may prove to be a help or hindrance in gaining economic and other opportunities as some of these prejudice still make up part of the cultural values of Caribbean people. Also prominent is the matter of wealth/money. The classes with the surplus money tend to be the descendants of whites and coloureds who have had alliances with whites or in the case of Trinidad where the East Indians have accessed money through frugal living, farming and business sense of their ancestors; similarly are the Chinese **and the** Syrians and Lebanese.

Another factor in contemporary stratification **is friendship and family networks**

(ain't who you know but who knows you). Here elites act as gatekeepers in utilizing selective hiring and firing practices to prevent certain social groups from accessing social mobility.

Education has been the basis for new class formation to combat legacy of plantation society.

Today same racial and ethnic groups are found in all strata of society largely because of the meritocratic systems brought about by education (meritocracy/intelligentsia). Through education members of society can get access to elitist social clubs as well as professional

clubs. Of course if you lack education then you are confined to menial jobs/blue collar. In the Caribbean the traditional practice has been for affluent males to marry lighter skinned females. This has led to upward social mobility for females. The offspring of such unions are expected to access even higher levels of the social strata because of the combination of light skin and inherited wealth.

Mobility of blacks and the browns were generally through **marriage** to white foreigners. Another form of mobility was through the **occupational ladder**. Modernization of economy has altered stratification system and created modern enclaves thus creating new social classes and a changed stratification system; high and low wage sectors; increased opportunities for white collar and professional occupations. Status is therefore now based on **income earning** ability rather than on middle class acculturation (high prestige and high income as well as low income and low prestige white collar class). Mobility between the two was based on varying combination (education, network, skin colour). Indigenous and former exclusively white upper classes no longer dominate the upper layer of society. Material influence and income are the main determinants in contemporary Caribbean notwithstanding the fact that race, colour and education and training still affect life chances of individuals.

C. Social mobility

Social Mobility refers to the ability of a given individual/group to move up the social strata. Structural mobility refers to factors at the societal level that affect mobility rates. Social mobility may be either relative (entire occupational structure is upgraded such that only .. content of work changes not relative position in hierarchy) or absolute (son's education,. occupational prestige and income exceeds that of his father).

: THE CLASS SYSTEM The Ruling Class

Land owning class (plantocracy)

- the capitalist: owners of the means of production; own large acreage of
- members of exclusive private clubs; expensive houses on high
- altitudes
- shops abroad;
- elite schools for children

The Middle Class

- Upper (professionals)
- Middle (teachers, nurse)
- Lower (police, military)

The working class

- Hire for; wage
- Work specific hours
- Normally work for capitalist organization
- Member of union
- Skilled and unskilled workers

Intelligentsia

- "most intelligent" class in society
- theorists, writers on politics and economy
- usually university professors
- normally advisors to government

Hybridization

Hybridization generally refers to the mixtures and **syncretic** forms which occur in society (race, religion,

language, food etc). Hybridization began with the era of discovery when European and Amerindian copulated

which resulted in the creation of the Mestizo. This later became entrenched in plantation society with the

European and African producing the mulatto or coloured). A 'pigmentocracy' evolved where continuum of colour exhibited by individuals was deeply analyzed and discussed. It became a norm to describe someone using their colour as a major descriptor. It also refer to the intermarrying (miscegenation) between the races and the production of the offsprings from that union e.g. mestizo, mulatto, mustifmo, dougla, quadroon (3 Caucasian grandparents), Octoroon (7 great grandparents who are Caucasian) and Sambo (full blooded African)." Through hybridization members of society can gain social mobility based on factors such as inherited wealth, lighter shade complexion, ownership of property, membership in social clubs.

E. Cultural Erasure/ Retention/ Renewal

Loss of cultural practices (cultural erasure) occur as a result of tension/conflict between traditional way of doing things and the modern or progressive way. The traditional way when compared to modern way seems redundant, laborious and time consuming e.g. cottage craft pieces versus mass production in factory; story telling vs. videos and electronic games.

Erasure occurs because traditional ways do not conform to modern/progressive/western lifestyle. Erasure also occurs because traditional cultural values are not being taught to younger generation and as older folks die so do the practices with them (sometimes too younger generation are not interested in learning traditional folk forms). Cultural diffusion or the meeting of a dominant culture can also wipe out a more primitive culture (contact of Europeans with indigenous population in the region; enslavement of Africans by Europeans). Catastrophic events can also wipe out the population of an area and with it culture (wars, . earthquakes, volcanic eruption, tsunamis etc).

Efforts to salvage parts of our past by fashioning new practices based on the old are referred to as cultural renewal. This stems from the feeling that there is much value to be learned from some of the practices we have ignored and/or allowed to be almost wiped out. People are making more effort to preserve cultural heritage while others are becoming more aware of their

cultural legacy. For others, it is in response to an identity crisis of who are we. Schools and government have been getting into the act by teaching cultural heritage as well as passing legislation to enforce compliance with renewed interest (Emancipation day in Jamaica). In an effort to keep traditional practices alive, there has been much cultural retention. This may be as a result of deliberate desire to do so as well as the need by some minority group to keep their sense of identity. Small groups may feel alienated within larger community and so they deliberately work at preserving their traditions. Some governments in ethnically diverse countries also try to give each group national prominence so their traditional folk ways and practices may be celebrated nationally. For others, retention of the traditional practices is for economic rather than cultural gain (tourism packages). Retention. has occurred in many cases because of their relevance to the existence of the society, no better way has been discovered to replace the existing one, older members are indoctrinating younger members, to show sense of belonging within society as well as forced practice by elders/authority within the group.

IMPACT OF HISTORICAL PROCESSES

Post Columbian

MIGRATIONS

Pre Columbian

TOWARDS
INDEPENDENCE

*Economic
franchisement*

The **pre-Columbian** migratory period is believed to originate from NE Asia across Bering Strait to Alaska then southwards into the Americas. From South America (Venezuela and Guianas) the Kalinagos and Tainos moved **northwards** through the Lesser Antilles.

Tainos:

family — village settlements along river valleys, coastal areas.

Social organization: women did farming, (slash and burn) men did hunting and fishing, their society was hierarchical and pacific

Government: independent Arawak community ruled by cacique; hereditary ruler who was also high priest and judge, mitaynos,

Religion and spiritualism: cacique was high priest, believed in coyaba

Customs: flattened forehead of babies, singing, dancing tobacco smoking, playing bates,

Food: seafood, vegetables, pepper, pepper soup, cassava, agouti,

Architecture: rectangular houses. Using indigenous material (thatch, poles)

Technology: skilled in constructing dugout canoes, stone tools, spears, bows and arrows, straw baskets, hammocks

Farming methods: subsistence farming; slash and burn, primitive tools

Kalingoes

- family-village settlement,
- Social organization: women did farming, men did hunting and fishing, their society was militaristic.
- Government: family independent, justice carried out on a personal level, civil leader supervised farming and fishing, answerable to 'ouboutu'
- Religion: spiritualistic, special boys trained as priest, each person had their own maboya (spirit)
- Customs: singing, dancing, smoking tobacco, initiation into manhood, flattened babies' forehead
- Architecture: rectangular houses made from indigenous material (thatch and pole) Technology, skilled in constructing dugout, effective fishing methods

Migratory movement during the Columbian period was westward across the Atlantic with the aim of finding the 'Indies' and getting its riches by trade or conquest. Columbus was supported by the Spanish royal family who was hoping to get riches from the orient before her rivals, spread Catholicism and for personal and national glorification. Columbus did reach the Americas because of his knowledge of navigation, winds and currents. He pioneered the trade winds to and from Caribbean, and in so doing became the first European to visit the regions and parts of the Central America . He was the first to set up permanent contact between Europe and Caribbean although he was a poor colonizer and administrator.

Spaniards became the first European masters of the New World. Amerindians became the **conquered race** subjected to Spanish rule, domination and oppression resulting in destruction of .their culture (assimilation), new language, religion, technology, tools, food, animals etc. Spanish greed resulted in the enslavement of Tainos under the encomienda system: noblemen were granted lands under repartimiento and Tainos under encomienda so they could be protected, converted and instructed, in return they we're required to work the land and pay tributes. It became a system of using a supply of forced labour (slaves) for economic production (mining, farming, and ranching). It ensured Spanish expansion, settlement, and control of lands. The vast lands could not have been economically viable without the support of the encomienda system. It began a pattern of forced labour and oppression that characterized European relations with its colonies.

The superior technology of Europeans became the instrument to enslave and plunder the simpler indigenous societies of the region. Religion was introduced as an instrument of conquest and imperialism. It resulted in the genocide of the Taino groups and mass murder of others. This had far reaching impact on the Caribbean region namely: (1) a change in the social composition of the region: whites, Amerindians and Mestizos) end the stratification within the society according to caste and class. (2) genocide of Amerindians from diseases, guns, swords and suicide. (3) marroonage as some Amerindians fled to the safety of the mountains, forests and caves in territories such as Dominica, Guyana, Jamaica, St. Lucia and St. Vincent. (4) It began a pattern of rebellion **and** resistance among peoples enslaved by the Europeans (attack on La Navidad, 1625 Kalinago attacked Warner in St: Kitts (5) Amerindian

co-operation where Tainos and Kilanagos diverted energies of fighting each other to fighting Europeans 6) cultural exchange: Amerindians introduced tobacco smoking, use of hammock medicinal properties of plants and herbs, tropical products such as root crops, beans etc. whereas the Spaniards introduced better inland transport (horse), sturdier houses(Spanish wall), more elaborate system of government Cabildo, Viceroy), a new religion (Christianity), new crops such as sugar cane, banana, citrus (except grapefruit), different style of dressing, new animals such as chickens, pigs, goats cattle.

Today significant numbers of indigenous peoples are to be found in Guyana (Arawak, Caribs, WaiWai, Warau), Belize (Garifuna), Dominica (Caribs) and Surinam! This is so because Guyana, Belize, Suriname were too large for colonial masters to establish full control over the entire territory. This meant that Amerindians could retreat into the interior and live. On the other hand Dominica was not greatly populated by Europeans (too mountainous to cultivate; lacked mineral wealth) so Amerindians could therefore survive in such an environment. In the wider Caribbean, Amerindians decimated by hard work and harsh treatment (encomienda), European diseases, genocide, suicide and infanticide. Post Columbian westward movement continued with the coming of other European nations (English, Dutch, French) trying to break Spain's monopoly. Through their actions other groups migrated westwards either forcedly in the case of the Africans or voluntarily in the case of the Asians.

COMING OF THE AFRICAN

The decline of tobacco in the Caribbean brought about by the large scale productions in Virginia'-(USA) necessitated a change; Another crop was heeded to replace tobacco. Sugar was experimented with and accepted, as there was a great demand for a sweetener in Europe. The cultivation of sugar cane needed extensive labour as this was a plantation crop. To satisfy this demand the Europeans turned to Africa and thus began the Atlantic Slave Trade. This brought about a dramatic change into the Caribbean society- a new system of production based on private ownership of land and people. It heralded in a new class structure and division of labour. This movement was a forced one and because the success of the European planters depended on the oppression of the Africans, forced culture change took place. The Europeans did everything-in their power to alienate the African from their cultural identity-" new names, laws forbidding religious worship, scattering of different cultures. Despite these attempts, many different African cultural forms have survived. Examples of these are evident in: the elements of West African religious practices which can be recognized in the cults of

obeah, voodoo and Shango. These were passed down from one generation to the other. Some African slaves in Jamaica kept a strong belief in the power of obeah and myalism (which developed into pocomania). These practices involved sorcery, witchcraft and the use of charms. It is through dancing and music that these cults are kept alive and active in contemporary Caribbean.

West Africans who were forced to work and live together when they were brought to the Caribbean invented a common tongue (**language**). This led to the emergence of patois (mixture of African, French, English and Spanish dialects) The West African influence in patois is more dominant, not only in vocabulary but also in pronunciation and grammar eg. nyam, su-su. Kas-kas, bufbuf, bafan, booboo). **Certain foods** found and eaten in the Caribbean are also a part of the West Africa culture which often times bear the same name (yam, cocoa, asham, fu-fu, susumba, peanut, duckoonoo).

Medicine: This involves the use and administration of herbs and bushes. Folk medicine has survived in the Caribbean regardless of the fact that modern medicine has been instituted. The use of herbal medicine came through visions and experiments by the slaves who brought the knowledge of nature and its uses. The obeah men were the slave doctors who administered various teas, baths, potions and oils for the purpose of healing (love bush for fevers, leaf of life for common cold, Jamaican Quassie for malaria, soursop leaf to expel worms from the body etc.)

Music and Art: African music can be identified in some Caribbean churches, festivals and theatre. The call and answer style of singing is indigenous to Africa. Also, the use of drums which escaped the dominating hands of the planters who tried to wipe it out. In Jamaica some of the melodies and rhythms brought here by slaves are present in our music—spontaneity, polyphony, complicated rhythms, speech tunes. Some musical instruments of African descent are still prevalent in Caribbean today (congo - talking drum, Abeng, xylophone, bamboo fife, Jamaican banjo). The majority of West Africans imported in the Caribbean were skilled and talented. This rich cultural heritage was retained and reflects outstandingly the Caribbean “air”.

Much of the ceramics, carvings and sculptures reflect a deep African influence. The styles of Caribbean artists can be recognized as being similar to those of the African artists. Festivals/celebrations: various festivals/celebrations have a strong link to West African practices. Some examples are Jonkonnu, Nine Night, Bruckins Party, Dinki

Mini, session and yam festivals.

Social relations: These included the concept of a village raising a child, family based on kinship; blood ties, common ancestral spirits, respect for the elders, extended family to include all blood relations and otherwise. The Africans were able to keep these cultural forms alive which they passed down the generations by practicing them secretly and on special occasions. The planters attempted to brain wash the slaves by forcing them to believe that the African culture was barbaric and inferior. To avoid punishment, slaves were forced to adopt some of the cultural practices of Europeans. These Africans however began to mix the two cultures together in order to plea their masters and to remain faithful to their heritage. The African culture emerged to be the more dominant and was able to survive. The cultural practices of the Africans were also retained through their association with religion, song and dance which the planters viewed as harmless and as a result they survived from one generation to the next. The Sunday market also acted as a medium through which African culture was retained as it became a meeting place for the slaves. It gave them the opportunity to not only sell their goods but to also consult the obeah men, listen to stories or music and to take part in dances

COMING OF THE ASIANS

With the abolition of slavery, the planters turned to Asia for a new supply of labour and for decades thousands of East Indians(1838) and Chinese{ 1853) were brought to the West Indies under a contractual arrangement to labour on the sugar plantations mainly in Guyana Trinidad and to a lesser extent Jamaica. The Chinese came in small numbers when compared to other groups. Although they were hard working they lacked experience and physical capability to work on the plantations. As soon as they could, they left the plantations and became involved in more suitable activities such as shop keeping, retailing, and huckstering They too added to the class structure of the region. Like the Africans many of their cultural practices were erased or acculturated thus contributing to the cultural diversity existing in the region. Their language, many customs and their religion were erased. Many Chinese tended to intermarry with East Indians and Africans (Dougla).

The East Indians came in larger numbers (approximately 400,000 0 and were from different castes - agricultural, Untouchables and Brahmin. They were housed together and placed in gangs regardless of their caste. For the East Indians plantation life afforded them privilege of retaining many of their cultural practices. These new immigrants brought new religions, language, food, dress, festivals, music and general lifestyle. For some, plantation life in the region was one of oppression and as soon as they could they left the plantations became involved in business(peasant proprietors who worked part time on the estate and cultivated their lands (sugar cane, rice, ground provisions, fruits).

IMPACT OF IMMIGRATION INTO THE REGION

- Opened the Caribbean to Europe, Africa and Asia
- Introduction of new technologies- processing of sugar cane
- New systems of government
- New architectural style using different building materials: Spanish wall, Georgian
- New languages: Spanish, English, Dutch, French
- New crops/dishes: sugar cane, bananas, citrus, rice, mangos, curry dishes, pak choi tamarind, mango, Chinese dishes, buns, etc
- New religious beliefs: Christianity, Hinduism, Muslim
- Adequate and reliable (although inefficient) use of labour force which maintain monoculture production
- New system of production - (slavery & indentureship)
- Created a multi-racial society with diverse culture
- Caused a loss of identity for migrants and threatened family structure
- Stimulated growth "of social services especially medical care
- Contributed to growth of peasant farming, huckstering, shop keeping
- New skills introduced into the region : metal, leather, irrigation
- Movement from plantations by ex-slaves: free villages; growth of peasant farms
- Movement westwards / SW to Central America: Cuba (sugar, domestic, dress

making, Costa Rica, Nicaragua (banana), Panama (railway > canal banana),
Venezuela (oilfields)

- Movement northwards to USA (WWII- war time jobs)
- Eastwards to England, France (WWII- war time jobs; reconstruction after WWII in transport, construction, postal, service nursing)
- Northwards to North America - economic as well as political (Cuba, Haiti, Dominican Republic)

IMPACT OF CARIBBEAN EMIGRATION

- Brain drain- loss of skilled members of society- which region could ill-afford
Governments must spend additional money to replace loss skills Region does not benefit directly from investment made in human resources Unemployment levels..are lowered
- Remittances sent home by emigrants used to improve social and economic conditions
- Pressure on limited social services lowered- education, health, and housing.
- Ease pressure on unemployment / underemployment level
- Returning nationals brought new experiences and ideals to the region trade and self government
- Male seasonal workers caused disruption in family life — single parent, weak parental control

SYSTEMS OF PRODUCTION

Communal system : This existed during the pre-Columbian time when the Amerindians occupied the region . Under this system ownership of land was in the hands of the villagers and production of crops was a community effort for the entire village. Encomienda: This system was introduced by the Spaniards in the 16th century whereby each encomiendero was allocated 30 Amerindians who laboured in the mines, on the ranches or on the farms. Produce was for the encomiendero who in turn offered protection, education and Christian teaching -Roman Catholicism (somewhat similar to the feudal system which existed in Europe). It became a system of using forced labour for economic production in Spanish territories. This led to the enslavement and eventual extermination the Amerindians. This system facilitated Spanish expansion, settlement and control of la the New World. It ensured the economic viability of Spanish America and the Indies. An impact was

that it started the pattern of forced labour and oppression that came to climax European relations with its colonies. European superior technology became an instrument to plunder and enslave simpler indigenous societies.

Slavery: has its origin in the Old World but its climactic expression as a comprehensive way of life in recent history took place in the New World and more so in the Caribbean. Between 1600's and 1800's over three million Africans were brought to the Indies in response to the sugar revolution. It impacted on land tenure, land prices, new " farming practices, population size and structure.

Indentureship: British whites in the 17^m century came to work in cotton and tor fields - labourer signed contract in return for passage and subsistence, at the end of the contract the servants were free to remain or return home. The scope became more extensive after emancipation when Asians (Indians and Chinese) were recruited to work on plant'

PLANTATION SYSTEM

This system maybe described as, "A form of operation emerging out of, and d^to suit, tropical circumstances. It featured extensive cultivation of single (export) crops, huge farms using gang labour. Each plantation became a self contained unit or '**total** -institution' catering to the needs of its resident population and ruled by men who held absolute power of life and death over the enslaved population". (Waterman p. 42) Total, institutions formed isolated and enclosed communities. The lives of the members are controlled by authority - daily life /relationships are stipulated by rules, and established^ procedures. Also of interest is how individuals adapt to the institution that each has his own personalities, disposition and value system. The institution seeks to socialize individuals to adopt new norms and values important in their survival.

"The plantation system was an instrument of political colonization. It brought capital, enterprise and management to create economic structures which have remained basically the same. It brought together different races from various parts of the world to labour in its service and thus determined the population and social structures now existing in the region. It introduced new crops, the cultivation of which still represents the chief means of livelihood in the region. It has helped to shape the whole environment of the region. The system was based on **cheap land** often "purchased" with beads and mirrors, where the locals may have had no idea of the

concept of land sales and assumed they were just making land available for temporary use; **cheap labour:** originally slaves, then indentured labour from elsewhere (India and China) or local people, capital: the plantations were set up by European companies now more locally based or multinational with local component and integrated marketing: often the products were directly used by the same-company-(Vertical integration from production to final sale to consumers). The long term impact of these forms of forced labour have become as entrenched as they were closely incorporated into the prevailing economic, political and social structures.

Economic structure: it was an inefficient system of production where labour costs were grossly undervalued, monocropping tradition.

Social Structure: Race was the guiding principle of stratification; tradition of interracial violence, reproductive role of men and women diverted from the family for the benefit of the plantation; traditional gender roles displaced; replacement of African culture with a West Indian Creole culture.

Demography: severe overpopulation of some areas.

Land use: consolidated ownership among the wealthy, entrenched obstacles against divesting land to the peasantry.

Chief characteristics:

- Monocropping
- Foreign owned
- reliance on metropolitan countries
- Patterned relationship of people to land and determined how the land with one between them
- Gave rise to peasantry we experience in the region today.
- Export oriented
- Bureaucratically organized
- Vertical integration
- Classified people into different the statuses together with formal people live on definition of the relationship another
- It was both a social and an economic system

The advantages of the plantation system:

- regular and efficient production,
- uniformly high quality products,
- planning for depreciation
- scientific research and

- economies of scale,
- improvement in infrastructure

From the plantation system we have inherited a plantation society: - our society is characterized by unstable family organization; hierarchical class relations low level of community involvement, mobile populations always on the move (migrating to find seasonal employment, organized to fulfill plantation goals - profit, it's a monoculture society - dependence on one main industry/economic activity.

C OPPRESSION OF CARIBBEAN PEOPLE AND THEIR RESPONSE

OPPRESSION: unjust, unfair treatment

- Tainos were oppressed by Kalinagos through raids and enslavement of women folk.
- Tainos were oppressed by Spaniards through the Encomienda System- overworked, beaten, tortured, killed.

Africans were oppressed by Europeans through chattel slavery:- economic oppression psychological & ideology, social, cultural and physical

- Plantation owners and ex-slaves oppressed indentured servants: confined to estates, subjected to fines, and imprisonment, unsanitary barracks, despised, meagre wages.
- Present day Caribbean people are oppressed for various reasons; gender biases, social class, poor infrastructure, low wages, poor working & living conditions.

RESPONSES

- Migration: to Greater Antilles by Tainos; to urban centers by indentured servants; other countries by present day people.
- Passive resistance: pretence (deaf, lack of understanding of oppressors language, fake illnesses, malingering , satirize /mimic European lifestyle, suicide, infanticide,)
- Active resistance: Destruction of property (maiming of animals, damage to machine burning of fields); killing of overseers; riots and rebellions: attack on La Navidad (Amerindians), 1831 Christmas Rebellion, Maroon wars, Haitian Revolution, Berbic revolt, Bussa revolt, Bush Negro uprising, Tacky Rebellion, Guadeloupe blow up
- Marronage - escape to hills, wage wars- attacks and raids),
- Purchase contracts thus freeing themselves, went into business (indentured servants}
- Accepted Christianity or practiced African religion (voodoo, obeah, myalism).
- Today: demonstrations, riots, looting & burning, protest songs, radio talk sho debates, strikes, 'sick out', 'go slow' etc.

MOVEMENT TOWARDS INDEPENDENCE

A. EXTERNAL FORCES

World wide movement to give up colonies (decolonization)

Article 739 (1945) of United Nations required advancement to self government of countries.

1947 Britain granted independence to largest colony in world (India).

Labour Party in power in Britain supported self-government for colonies.

B. INTERNAL FORCES* (Response to metropolitan rule)

- constant criticism of British rule in Trinidad and B. Guiana
- violent response to British rule (Morant Bay Rebellion in Jamaica)
- campaign for elected representatives in the British colonies
- 10 years war (1868 - 78) in Cuba against Spanish rule (Maceo)
- revolt by Betances in Puerto Rico

C. GROWTH OF NATIONALISM

- Racial Awareness led by Garvey and UNIA
- Economic Depression (1929 - 1938) unemployment, high prices & low wages led to discontent with Crown Colony government. This led to series of disturbances throughout English speaking Caribbean (1934 in Trinidad, 1935 in St Kitts, St Vincent, St. Lucia, British Guiana, 1937 in oil industry in Trinidad, 1938 in Jamaica and British Guiana). This showed Crown Colony government was out of touch with the masses hence the need for representative government.
- Working Class Solidarity : this led to birth of trade union movement in the region; this provided the muscle for political parties demanding independence (Cipriani, Butler, Critchlow, NW Manley, Bustamante, Coombs, Vere Bird snr.)
- Moyne Commission set up to investigate disturbances in British colonies and recommended **Strengthening of trade unions** (leadership training in industrial relationship and negotiation; A labour department for inspection of protective laws; W.I. welfare fund to provide relief measures (health, education, housing land settlement, labour department & social welfare)
Agricultural Reforms: land settlement schemes to help alleviate unemployment and raise standard of living; in rural areas.

D. POLITICAL ENFRANCHISEMENT IN BRITISH COLONIES

- Creation of political parties - JLP & PNP in Jamaica; Barbados Progressive League & Democratic Labour Party in Barbados; Progressive Peoples Party & Peoples .. National Congress in B. Guiana; DLP and PNM in Trinidad - .(Formal : birth in disturbances of 1930's)
- Began with constitutional change: Election of representatives to the legislature
- Universal Adult Suffrage: Every man/woman over, 21 has the right to vote in an election thus enabling elected members to make laws.(1944 in Jamaica, 1945 in ; Trinidad, 1953 in British Guiana 1950 in Barbados,1960 in Belize).
- Ministerial system Elected members of legislative council from, the majority party . heads a department of the civil service (1950 in Trinidad, 1953 in Jamaica, 1954 in Barbados, 1957 in British

Guiana)

- Full internal self government: Elected representatives (premier and cabinet) are in control of all matters of governance, governor still in charge of foreign affairs and defense - 1959 in Jamaica, 1961 in Barbados, Trinidad, British Guiana, 1964 in Belize and Bahamas, 1967 in Antigua, St Lucia.
- Independence: All affairs transferred to citizens of country (1962 Jamaica. Trinidad: 1966 Barbados and British Guiana; 1973 in Bahamas, 1974 in Grenada, 1979 in St Vincent, St Lucia, 1981 in Belize)

SPANISH COLONIES

- 1895 — 1898 revolution ended with Treaty of Paris; Cubans obtained independence from Spain but US army occupation
- 1898 Puerto Rico ceded to US
- 1898 - 1902 Estrada Palma as president but US A had "blank cheque" to interfere i Cuban affairs
- 1916 Universal adult suffrage in P. Rico ,,,,,,,,,,
- 1938 Munoz Marin founded Popular Democratic Party- in P. Rico .,
- 1952 P. Rico became commonwealth
- 1902 - -1959 series of dictatorship, in Cuba with and without US support
- 1959 overthrow of Batista by Castro

ECONOMIC ENFRANCHISEMENT

Not only were Caribbean people yearning for political independence but with it economic freedom at both individual as well as national level

INDIVIDUAL LEVEL

Movement from the plantations involved not only freedom from the system but freedom in earning for oneself. Ex slaves established free villages and peasant farming. Many became hucksters (higglers). For the indentured workers economic enfranchisement came in the retail/shopkeeping/restaurant business for Chinese. East Indians established their market gardens, horticulture, rice farms and transportation. They used their skills to advance economically.

NATIONAL LEVEL

In addition to the importance of agriculture in the economy of the region, governments have made effort to diversify not only the agriculture sector but other areas as well with the intention of gaining economic independence. Efforts included developments in forestry, mining, manufacturing and tourism.

- Agricultural diversification included lime cultivation in Dominica; cocoa in Trinidad, nutmeg in Grenada, arrowroot in St. Vincent and rice in Guyana.
- The mining of bauxite in Jamaica and Guyana, oil and asphalt in Trinidad, natural gas in Barbados, salt production in St. Kitts, Anguilla
- Light industries — consumer goods such as cigarettes, soap, matches, biscuits, bay rum-aerated beverages, confectionery, beer garments, printing
- Tourism- sun, sea sky- post WWII

5. IMPACT OF GEOGRAPHICAL PHENOMENA

A. PLATE TECTONICS

The plate tectonics is the study of the movement of landforms which result from these movements. This theory explains that the crust of the earth is broken into seven major and several minor plates - continental and oceanic - which move about due to convection currents in the mantle. The continental is made up of older, lighter granitic rocks (Si Al) and the oceanic is made up of younger, denser basaltic rocks (Si Ma). These plates -either move towards, away from or alongside each other. It is along these plate margins that ^{most} of the

world's major landforms develop and where seismic, volcanic and tectonic actions take place. Along each margin different movements occur which impact on the earth's surface and by extension our existence. Three types of movement can be distinguished: divergent, convergent and transform.

Along the convergent margin/boundary there is destruction as heavier plate (oceanic) sinks under lighter one (continental). The heavier plate is destroyed forming sea trenches and island arcs with volcanoes. The main activities are volcanic and earthquake activity and mountain building. Along the divergent margin/boundary new oceanic crust appears forming mid ocean ridges with volcanoes. Along the transform margin/boundary the plates slide past each other, and as they do they build up stress, earthquakes are the main activity.

Within the region, the North American Plate is moving away from the Mid Atlantic Ridge (divergent) and moving towards the Caribbean Plate (convergent). The N.A. plate moves under the Caribbean plate and is destroyed. The destructive boundary to the east of the Caribbean is responsible for the creation of the Puerto Rico trench and the volcanic islands in the Windward Islands. Molten rocks are forced up at the edge of the Caribbean plate. In Greater Antilles the plates move alongside each other (transform) creating faults. There is no volcanic activity present but instead sudden movements cause earthquakes to occur.

Plate Boundary

EARTHQUAKES

Earthquake is a vibration or a series of vibrations due to sudden movement of crustal rocks. They occur wherever stresses build up within the crust as result of crustal plat* movements (transform). As stress is applied to an area the rocks will gradually bend to accommodate the forces being exerted. Eventually, however the stresses will become so great that they will exceed the strength of the rocks which will then break, releasing large amount of energy. This sudden release of energy produces an earthquake.

The location of the stress within the crust is called the focus, and the position on the earth's surface, directly above the focus is called the epicenter, with the vibrations spreading outwards in concentric circles from the point. The effect that an earthquake has on the surface depends on the types of rocks near the focus as well as the distance from the epicenter. The shock waves of an earthquake are recorded by a seismograph winch calculates the intensity a Richter scale which ranges from 1-10. Between 1 and 3.5 there is no effect, this tremor wj only recorded by the seismograph. Between 3.5 and 5.5 the tremor was felt but there is no structural damage. Between 5.5 and 8 the effects become more devastating; with anything over 8 there is total and widespread destruction.

When earthquakes originate under the ocean, it causes a disturbance of the water which, then results in tsunamis being generated. These gigantic waves cause considerable damage to coastal areas (Asian tsunami 2004). The most disastrous earthquake in the Caribbean was in 1692 in Port Royal, Jamaica, when most of the city was destroyed and about half of it was submerged. Two thousand people were killed in the earthquake; another four thousand were later killed by disease and starvation. In 1907, much of Kingston was destroyed by the earthquake, which was then followed by a fire and then a tsunami wave.' In 1993 Jamaica felt another earthquake which rocked large portions of the island but caused minor damages. There were no losses of life. The most recent earthquake took place in January 2010 in Haiti and which destroyed most of the capital Port-au-Prince. It is estimated that the death toll may reach as high as 300,000. Earthquakes can have the following effects:

- Destruction of life and property and this is accompanied by disruption of communication lines, in addition to this is the outbreak of uncontrollable fires from broken gas lines.
- The earthquake triggers landslides and rock fall.
- Gigantic waves called tsunamis result in destruction of coastal areas For exam in 1692 great damage was done to Annotto Bay, Buff Bay and Port Antonio in Jamaica In addition, 35 of 115

French buccaneers who were raiding the town St. Ann's Bay were killed by both the Earthquake and tsunami waves.

Towns built on solid rocks suffer less **damage than those built on consolidated materials.**

VOLCANOES

There are **three types** of volcanoes - lava cone, ash and cinder cone and composite cone - based on the material which makes up the volcano. In addition volcanoes are classified according to their level of activity. The **active** volcanoes are the ones "which erupt **or** show.,; signs of eruption on a regular basis. The **dormant** volcanoes are the sleeping ones which have not eruption for a long time but have signs or grumbling. The **extinct** ones are those which have not erupted for centuries; they have practically died out.

The Caribbean region is part of the belt of volcanic activity in the world. There are many evidences of volcanic activities in the region. These include Soufriere eruption in St., Vincent in 1979, Mt. Pelee eruption in 1902 and the Soufriere eruption in Montserrat in 1995. In addition to these there are many evidences of volcanism such as Crater Lake in Grenada, volcanic plugs in St. Lucia, fumeroles which sends out steam and gases and sulphur dioxide (St Lucia and Dominica)

Negative impacts

- Destruction of lives and property; displacement of people and sometimes loss of culture
- Pollution due to contamination of water supply by ash, dirt and gases.
- Poisonous gases released into the atmosphere resulting in respiratory ailments
- Mudflows which destroy vegetation and infrastructure
- Changes in weather pattern due to clouds of ash which decrease the amount of sunlight reaching the earth

Positive impacts

- Valuable minerals such as gold, nickel copper in areas such as Pakaraima area in Guyana
- Good farming soil from weathered volcanic rocks e.g. slopes of Mt. Misery in St. Kitts
- Hot springs which are potential for thermal energy in countries such as St. Lucia and Dominica
- Major tourist attraction - sulphur springs in St. Lucia, boiling lake in Dominica

- Export of pumice rock - Dominica
- Creates consciousness among Caribbean people as to the threat of natural disaster
- Causes governments to enforce building codes to mitigate against the effects earthquakes and other natural disasters

B. HURRICANES

These are severe and intense tropical storms which derive their energy from the tropical waters over which they pass. They are characterized by a well developed center calm or eye, low pressure, strong winds which move in an anticlockwise direction. This weather system brings heavy/ torrential rain to the region as they move from east to west. normal westerly direction

THE GLEANER FRIDAY, SEPTEMBER. 17. 20W

Life cycle of a hurricane

How hurricanes - giant whirlwinds that feed on heat, tropical winds - develop:

1 Tropical disturbance

Thunderstorms form over ocean as warm, wet air rises and hits cold air; winds blow African coast westward

winds: 38 mph (60 kph) flow

Necessary ingredients

9 Water temperature at least 80°F (27°C) in upper 200 ft (60 m) of ocean

5 Warm, humid air

6 Weak winds moving in same direction as developing storm

S 23°C KST Source: U.S. National Airspace Administration. San Juan, Puerto Rico. "Eyewitness to the Weather" by Grace: 2nd Cor., La Huitano

2 Tropical depression

Storms gather into depression/ begin to spin counter-clockwise Maximum

Hurricane / Maximum / sustained winds: At least 74 mph (116 kph)

3 Tropical storm

Spiraling winds turbulent. Sea absorbed into storm which picks up moisture, strengthening. Maximum sustained: 39 to 73 mph (62 to 116 kph)

circulates in opposite direction' Eye of

storm - 74 mph (116 kph)

5 Spiraling band of wind, rain can be 200 mi. (400 km) from center; can spin off tornadoes

6 Some air moves inward and sinks toward storm center ion - eye, a relatively clear low-pressure

7 Air below 40,000 ft. (12,130 m) flows toward storm center, is whirled upward. Hot air spirals up eyewall, creating strongest winds, torrential rains

NEGATIVE IMPACTS

- Disruption of settlements- flooding, damaged infrastructure, roofs,
- Loss of lives by drowning as well as by missiles blown by wind
- Pollution and water contamination
- Disruption in communication military lines, landslides, inundated roads
- o Destabilize the economy through destruction of crops and farmlands in general- especially crops susceptible to strong winds such as bananas and other fruits, flooding of fields causing crops to rot, destruction of poultry, industry sugar cane, food shortage
- o Social displacement: persons have to seek shelter in schools and churches, schools sometimes have to close .
- o Looting
- o epidemics

POSITIVE IMPACTS•

- replenishes aquifer: breaks drought, increases domestic water supply.
- generates employment in construction industry as buildings have to be replaced and general reconstruction
- region receives foreign exchange through increased remittances,, donations towards reconstruction
- forces adherence to proper building code
- promotes neighbourliness, unity and brotherhood as members of the community /society assist each other in recover}' efforts and reconstruction.

C. SOIL EROSION AND CONSERVATION

Soil erosion is the removal of the topsoil from the land. This is due to several factors but basically the chief cause is man's misuse of the land (human-mismanagement). In the Caribbean soil erosion is very prevalent in areas such as the Christiana and Yallahs Valleys in Jamaica, **Scotland District** in Barbados and slopes of the

Northern Range in

Trinidad. The types of erosion are:

- *Sheet erosion*, which is the removal of uniform layer of soil by moving water. It is most common in sloping fields where water causes tiny -particles to move downwards.
- *Gully erosion* which is the removal of soil by the action of water especially in steep areas where the water creates gullies
- *Wind erosion*, which is the removal of loose soil through the process of deflation. This occurs in areas where the land is bare and dry resulting in the particles become loosened and therefore susceptible to force of the wind

Types of misuse

- *Overgrazing* by livestock; animals crop the grass to a low level thus leaving soil bare and open to wind action e.g. SE Montserrat, Rupununi Savanna in Guyana, NE Barbados
- *Cultivation along steep slopes*: this results in gully erosion taking place e.g. Tobago, Christiana area in Jamaica and Scotland District in Barbados
- *Over cropping* as well as monocropping: this leads to soil deterioration as minerals and organic matter are depleted e.g. Hillsides in Jamaica, Grenada, St Vincent
- *Shifting cultivation*: this is practiced in forested areas in Belize (Maya Mt.) Guyana and Dominica and as a result heavy flooding have induced soil erosion
- *Deforestation*: removal of vegetation from forested hill slopes for lumbering, " cultivation which results in sheet and gully erosion e.g. Haiti, Jamaica, Scotland District, Northern range in Trinidad
- *Mining*: open cast/pit method causes soil to be exposed thus making it susceptible to wind and water erosion'

Soil Conservation

To achieve this there has to be proper management of the land, better farming techniques and a gradual return to permanent grass Or forest.

- *Terracing*: flat step like structures cut on steep slopes. This reduces rate of run off. In addition earth banks, spillways and drainage channels may be employed
- *Strip cropping*: crops are grown close together in strips to ensure soil cover
- *Crop rotation and diversification*: prevents soil exhaustion as one crop replaces nutrients used by another; irrigation provides moisture preventing wind erosion; application of fertilizers mirdmized soil deterioration
- *Controlled'grazing'zero grazing* (paddocks)
- *Afforestation and reforestation*: planting and replanting of trees respectively which act as protection for soil from heavy downpours, roots absorb excess water, and bind soil particles together
- ***Contour ploughing***: crops are planted in horizontal rather v than vertical furrows. This reduces runoff and helps to maintain soil moisture.
- *Windbreaks and shelter belts*: trees planted in a line along the path of the wind. This checks wind speed and force

D. Coral Reefs

A coral reef is a large strip of wave resistant coral rocks built up by carbonate organisms. They maybe found close to the surface or even rising above it. They are confined to tropical and sub tropical regions of the world between 30° N and S of the equator. Coral reefs need warm; clear, clean water 20° - 27° C; normal salinity,: shallow sunlit water (45 m below) and warm ocean currents. There are three main types of coral reefs: fringing, barrier and atoll. Fringing is low lying platform close to shore separated by narrow lagoon e.g.

Buccoo Reef off SW coast of Tobago. Barrier reef lies parallel to the coast separated by wide lagoon e.g. East Coast of Belize. Atoll is a circular ring like reef usually made up of several islands which enclose a lagoon e.g. In the Bahamas and Tuneffe islands off Belizean coast

Benefits of Coral reefs

- Protects coastline from the destructive waves and storm surges as they act as a barrier and so prevent beach erosion
- Provide harbours and beaches
- Tourist attraction (diving, photography) which generates much needed foreign exchange for the region
- Breeding ground for fish and other marine life thus impacting on lives of people along coast and especially in Caribbean where island culture exists - fisherfolks and so destruction would result in change in their livelihood
- Habitats, shelter and food for marine fauna and flora and so .destruction of coral reefs could result in migration/extinction of marine fauna
- Provides aesthetic value to region

Threat to Coral reefs

- Coastal development; construction of hotels, marinas provide turbid waters choke coral growth.
- Silt from land due to run off destroy coral organisms
- Fertilizer run off from farm lands as well as oil spills destroy marine life
- Damages caused by recreation and tourism- anchors, boat grounding and to' trampling
- **Over exploitation by fishermen**
- Destructive fishing methods such as dragging fish net dynamiting
- Global warming will result in rise in sea level. Waters will become too deep, corals to survive.

E. DROUGHT

Drought has long been recognized as one of the most insidious causes of human misery. It can occur in areas that normally enjoy adequate rainfall and moisture levels. Drought, as commonly understood, is a condition of climatic dryness **that** is severe enough to reduce soil moisture and water below the minimums necessary for sustaining plant, animal, and human life. In the broadest sense, any lack of what the normal needs of agriculture, livestock, industry, or human population may be termed a drought. The cause may be lack of supply, contamination of supply, inadequate storage or conveyance facilities, or abnormal demand. Drought differs from other disasters in its slowness of onset and its commonly lengthy duration. Before there were modern water-consuming cities, drought was an agricultural disaster. Now, with having expanded faster than water supplies can be made available, the specter of d faces both the farmer and the urban dweller. The main causes of drought are: widespread and persistent atmospheric calm areas called subsidence, which do no precipitation; Localized subsidence induced by mountain barriers or other physical features, Absence of rainmaking disturbances caused by dry weather, absence o humid airstreams, and human activities such as overgrazing, poor cropping meth" and improper soil conservation techniques.

IMPACT

Primary Effects (immediate): result from a lack of water. As a dry period progresses an water supplies dwindle, existing water supplies are overtaxed and finally dry up. This may result in loss of crops, loss of livestock and other animals, and loss of water for hygienic use and drinking.

Secondary Effects (resulting): If drought is long term, it may result in permanent changes of settlement, social, and living patterns. Secondary effects of droughts also include major ecological changes, such as increased scrub growth, increased flash flooding and increased wind erosion of soils.

The Impact of Droughts on Development

If a drought is allowed to continue without response, the impact on development can be severe. **Food shortages** may become chronic. The country **urban growth** may be accelerated. To respond to this, the government must **borrow heavily** and must **divert** money from other development schemes in order to meet these needs. All serve to undermine the potential for economic development. If drought response is treated as only a relief operation, it may **wipe out years of development work**, especially in rural areas. Agricultural projects in particular are most likely to be affected by droughts. A balanced agricultural program that develops good water resources, addresses the problems of soil erosion, adopts realistic limits on the expansion of animal herds, or accompanies herd expansion with comprehensive range management will contribute to the mitigation of drought impact. The same philosophy is used for reconstruction in the aftermath of a drought. It is an ideal time to introduce improved animal husbandry techniques, rangeland management, water resource development schemes and erosion control measures. The most serious impact of droughts can be that of creating **famine**. Famines can occur unexpectedly. More frequently, famine is predictable, in other words, the creep onset of crop failure or food emergency is predictable from a series of meteorological, agricultural, political and/or economic indicators that may be monitored continuously. 1 primary purpose of relief operations during famine is to **provide food to inhibit occurrence of malnutrition**. Often public health programs, particularly immunization campaigns and primary health care services, accompany the provision of food assistance to disaster victims.

Disaster Mitigation Strategies

To reduce the threat of droughts and to lessen their impact should they occur, a number of measures can be taken. The first step in disaster mitigation is to **identify areas that are at risk** to drought. In recent years, a large number of studies have identified drought-prone areas. To establish whether an area is drought-prone, individual **analyze historical records** to determine whether or not droughts have previously occurred. Once vulnerable areas have been identified, **priority zones should be established**. These zones are normally

the most marginal settlements. Once the priority zones have been identified, **comprehensive integrated rural development programs** should be initiated. Within the Caribbean, drought tends to occur on the leeward sides of the range on shore winds left moisture on the windward sides and are therefore dry des winds e.g. south coast of Jamaica

1983: 79% of Jamaica received below normal rainfall, worst drought in 55 years.

June/July 1985: 8 parishes affected in Jamaica; reservoirs almost empty, water restrictions enforced, pastures dried up animals starved, root crops withered, fruits fell from trees tree crops destroyed.

2005: St. Elizabeth, Manchester, Clarendon badly affected, crops destroyed, fires

IMPACT OF NATURAL DISASTER IN THE REGION

- relocation of settlements - volcanic eruption in Montserrat, earthquake in Royal, Hurricane Ivan (Portland Cottage)
- Reconstruction of schools, houses businesses and roads
- Discomfort of having to live in emergency shelters - little privacy & over
- Migration(internal/external)
- Destruction of crops - bananas in Jamaica, windward islands, sugar cane,
- Loss of life, injury respiratory illnesses
- Psychological stress- homes destroyed life changed - Post Ivan Stress
- Adherence to building codes and location
- Increased emphasis on disaster preparedness and mitigation education
- Training for disaster relief
- Increased COL -insurance costs, price gouging (food, building material etc.)

6. IMPACT OF SOCIETAL INSTITUTIONS ON THE CARIBBEAN

SOCIETAL INSTITUTIONS

Institutions are characterized by their **organized structure, sanctions and rewards, endurance over time, service to society**. Social institutions are not tangible they are represented through our **beliefs, values, ideas and images about what we want from society. They are what society uses to shape our lives**. Social institutions are the major **frameworks of society**. In other words social institutions are collections of norms, roles and values put into an organized way of living.

A. FAMILY

Nancie Solien defines the family as "group of people bound by that complex set of relationships known as kinship ties"; for others it is a group characterized by common residence, economic co-operation and reproduction. It is the basic unit within society which ensures continued existence of society - procreation of new generations; it is within the family that sexual activity; child bearing; maintenance, support and socialization of the young are performed. There is a wide variety of family forms in the Caribbean - nuclear, common law, single parent, extended, sibling households, reorganized/blended. The family is the primary unit within society **as it is within the structure that family members learn their earliest** set of concepts, values, knowledge and skills; it is there that the child is provided with its place in society- prestige or status; it is the focal point, in many cases, for leisure.

Relationships in household are clearly defined - men and women spend very little time together; they belong to different clubs, they go to separate gatherings and outings and play different games. In the lower classes men go to bars, rum shops and stand around street lights or on a corner or play game under a tree. Women meet at church, market and at home. In the lower classes women regard children as a blessing (at least one will provide support and companionship in later years)

As an economic unit, all members work together to get the work done, most times they share chores around the house. In most legal/religious marriages the male partner is the breadwinner; whereas in common-law relationships the economic role of the female partners is more dominant. In middle class families working and non-working mothers/wives depend on the financial position of family. Greater job opportunities, family planning methods, earlier maturing and independence of children have created changes within the family. Many families have working wife/mother and have a more egalitarian form of a family structure.

B. *EDUCATION*

- Teaches values and skills- develop hidden talent/skills of the members of society
- Manifest functions; transmission of culture & prepares young for adult roles in socie.
- Latent consequences: respect for authority, importance of competition, need to follow rules, perpetuates social class status quo
- Formal, non-formal and informal
- Further step in socialization; transmits culture and heritage
- Acquisition of academic skills, mastering of occupational skills, development of aesthetic appreciation and analytical modes of thinking, formation of attitudes, values and aspirations, assimilation of pertinent knowledge and information
- Important to national and regional development as lack of education leads to economic backwardness (low labour efficiency, factor immobility, limited specialization, deficiency in supply of entrepreneurship), the economic quality of the population remains low and there is under investment in human capital.
- Provides vehicle for social nobility
- Keeps children out of the labour market
- Serves as an instrument of change
- Provides recreational and social activities for the community
- Provides opportunity to meet new people
- Standing Conference of Ministers responsible for regional education — consider various programmes of regional production and distribution of textbooks, improving of facilities for secondary schools and education of physical and mentally challenged children
- UWI seeks new ways and means to ensure that Commonwealth Caribbean would always have people with knowledge, skills needed for regional development
- CXC- provides relevant secondary school leaving examinations, ensures that standard of exam are regionally and international Bly accepted

C. RELIGION

"Men in every society throughout the ages have pondered over questions dealing with such matters as existence, purpose and divinity. To help explain the unexplainable, provide a sense of purpose in life and make the unknown future less threatening, every society' has developed the institution of religion"(Campbell, 2002). All societies have developed values, norms and roles related to religious beliefs:

- Belief in a superhuman power embodied in a personal God (Gods and Goddesses) responsible for the creation and preservation of the universe; system of belief about the individuals place in the world and reason for existence within it; unified system of beliefs and practices relative to sacred things- beliefs that unite into a single community all those who adhere to them; provides the individual with a sense of purpose;
- Gives sacred authority to society's rules and values; maintains social solidarity- codes of conduct which bring about co-operation and cohesion among members; importance conservative force;
- Legitimizes the power and material advantage employed by the dominant groups/rulers of society;
- Commands major influence in society; affects non religious institutions such as the family and is instrumental in bringing about social changes;
- Creates social cohesion as it exerts a strong influence on social control and sets behavioural norms;

- Influences morality - values (such as pre marital sex) influence* teachings
 - Inculcates work ethic - honesty, punctuality, productivity; provide welfare services to the society
 - Perceptions of health governed by religion in some cases SDA, Mormons
 - Impacts on discipline in society- create stability as it instils a code and norms
 - Means by which man can escape the suffering and oppression and conflict of economic interest
- The Oppressed people seek solace in religion and the promise of a life free from sorrows and troubles; provides direction and focus for life's journey
- In the region; melting pot of people from all over the world - \ creation of new ones to meet needs of particular group.

D. JUSTICE SYSTEM

Social control- interaction of crime, law and judiciary as well as the services

- In hands of the judiciary which interprets the laws and see that members of society
- "Rule of law" important: infringement of persons rights sanctioned; accused of breaking the law must be brought to trial speedily and before he can suffer any penalties
- Sources of law; that which validates law, means by which law material from which we learn the law
- Common Law
- Civil law - private matters
- Criminal laws- ones concerning public issues
- Magistrates, Supreme, Privy Council (CCJ)

7. CARIBBEAN- GLOBAL INTERACTION

A. IMPACT OF THE OUTSIDE WORLD ON THE CARIBBEAN

The impact of the outside world is strong and pervasive and highly skewed. The strength of the influences comes mainly from history; forged by the competition among European superpowers resulting in cultural domination from metropolitan countries. Today much of the impact is based on the interaction through **trade, education & global information** due to our small size, limited resources and little power. French & Dutch territories are still "living outposts" of metropolitan lifestyles and values. Independent territories especially former British colonies still maintain ties with their former colonial power through investment, aid (funds for development in specific areas such as health, education) , trade (ACP), educational connections, traditions of government and law.

- **Westminster - Whitehall Model** of Parliament- legislature (bicameral with Senate and House of Representative), Executive (with P.M. and Cabinet), and Judiciary

(magistrate, Supreme Courts). Overlapping of legislature and E independent of the other two.

- **Education:** similar structure - 4 levels of pre-primary, primary, tertiary, until recently (70s) school leaving certificate based on Certificate of Education; North American System encroaching Community Colleges concept, naming of classes as grades rather than school
- **Electoral System:** determines kinds of elections and lays down to be followed. First Past the Post/simple majority: contest bet\ candidates for seat in parliament, candidate who polls most vote (therefore quite possible for party to win majority seats but not Proportional Representation: number of seats gained by a party proportional to number of votes polled
(no gerrymandering, in politics)
- **Mass media:** means used to communicate messages to large numbers simultaneously) T.V., radio, Internet, newspaper, magazines, films/documentaries. Media informs, educates, entertains and influence behaviour, values and culture. Impacts on taste/consumption pa music, language, lifestyle etc. Impact greatest where visual imp internet and magazines. We are kept abreast of what's happening
- **Tourism** results in positive impact: Foreign exchange earnings retention (cultural/heritage tourism), infrastructural development understanding and appreciation of ones culture; Negative impact values (nudity and dress codes, prostitution, drug trafficking, environmental pollution (beaches, damage to coral reefs, erosion through hotel construction, destruction of natural vegetation, prejudice, landownership etc
- Economic of dependence- trading with mother country, got pi export (banana and sugar)
- Politics of dependence: our economic potential is influenced Atlantic Nations, their MNCs and trade organizations
- Sports *and* recreation:: cricket, soccer, tennis, netball as well as maypole dances (European influence); basketball, hip hop, rap, American football . Halloween (Norm American influence)

IMPACT OF THE CARIBBEAN ON THE OUTSIDE WORLD

Culture of migration characterize Caribbean societies as migration means better life. This has resulted in major cities in the North Atlantic (USA, Canada, England) are heavily populated with Caribbean nationals. Natural increases have created 2ⁿ and 3rd generations within these countries. Caribbean nationals and their offsprings make up a significant segment of the population in England, Canada and USA. In US they number over 22 million (Strategy Research Corporation). In New York City they make up almost 25% of the population and within the tri-state area- New York, New Jersey and Connecticut- they number close to 5 million.

ECONOMIES

In US the Caribbean nationals are more socio-economically mobile than African- Americans and Hispanic (New York's Newsday Newspaper Survey). Their entrepreneurship **is** quite evident in many parts of New York City (Richmond Hill Hillside Avenue, South Bronx and other areas, as well as other states such as Florida Washington, Texas and California. Thus they represent not only very **significant power** (over 1 billion per annum) but they **generate jobs and contribute to the e development** of the areas they choose to reside in.

- Caribbean nationals helped to rebuild the war tom economies of Europe (i.e France)
- Brain gain: nationals educated at expense of Caribbean states migrate to developed countries where they establish themselves thus contributing to their economy
- Carnival celebrations help to generate millions of dollars to the economy of Canada and England when Caribbean festivals are held; boosts tourism; promotion of sales for businesses
- Migrant farm workers have worked in USA and Canada especially harvest! when crops have to be harvested before onset of winter
- Offshore banking in the region which provide tax haven for clients in metropolitan countries- Cayman islands, Bahamas, Turks and Caicos, Virgin islands

POLITIES

Political influence of Caribbean on outside world is based mainly on the issue of migration that Caribbean nationals have been associated with from the beginning of the century. Migration from the region to North America and Europe has forced countries such as the USA, Canada and England to revisit and look at the immigration laws hence revisiting immigration policies, illegal entries, quotas, illegal sales of passports and visas, and importantly the needs and wants of the migrant community. Faced with this large immigrant population, these countries have also had to take an active interest in the domestic p the region, as what happens here will have rippling effect on their societies.

Of course with such numbers, the immigrant population is in a position to form groups to influence policy making on issues such as education, unionization, discrimination. After all they comprise are voters who can use the 'Caribbean vote' to affect the *business* power in metropolitan countries. Immigrants are usually supporters of the status quo and so they generally accept the norms and values of these societies. They form a pool of voters or whom politicians

rely on to vote in a conservative manner (they are mainly interested in protecting their jobs and economic livelihood). Those immigrants from countries like Cuba and Dominican Republic tend to accept propaganda about the evils of communism and that capitalism offers a better alternative for development and so they form strong lobby group in favour of US policies.

The Caribbean impact in politics is quite evident in the tri-state area and other parts the US, in the number of state and city legislators of Caribbean heritage during national elections. Note that the first African-American woman to sit in congress and to run for the presidency was a Caribbean national - Shirley Chisholm. The first non-white chairman of Joint Chief of Staffs and Secretary of State was a Caribbean - Colin Powell. In addition the millions of Caribbean nationals present a large voting group. This has impacted on the politics of the host country because they make demands on the state (education, health etc). The government in response has created laws in their favour: ('Wet foot dry foot' policy in regards to Cubans, detention and deportation of Haitians, Ship Rider Agreement, Immigrant (resident visas, supporter of Helms-Burton Act)

In Britain, major cities have Caribbean nationals who have long settled in the count (3rd and 4 generations). They have become integrated in the societies to the extent that they have entered local politics and many are councilors. These Caribbean politicians form a group, which seeks the well being of Caribbean people in terms of employment, education, discriminatory practices, immigration laws etc. In addition the presence of large number of immigrants generate unfavourable criticisms from members of host countries who periodically speak out on issues such as stemming the flow of immigrants e.g. Enoch Powell in Britain in the 60s and more recently federal Government (USA) policy on Haitian 'boat people'

CULTURE

Caribbean music has developed from African, European and Asian mix with African music having the dominant role. The African characteristics in Caribbean music are

- close relationship between rhythm and speech tone (as in calypso)
- spontaneity in rhythm and melody
- willingness of performers to extemporize and their ability to do so

- **polyphony: emphasis on many voices and parts in music and the bringing these voices in harmony as well as keeping them separate**
- **arrangement of complicated rhythms (as in Haitian music)**

Music from Trinidad: Steel band music originated from the social distress of 1930s. When bamboo was banned and so people turned to **oil** drums on which they beat a rhythm in 'panyards'. Varying depths were cut from the oil drums to create sounds (like bass-pan, cellopan, guitarpan and pingpong). Ellie Mannette created tuning of the Calypso theme is like a ballad (simple song with musical accompaniment) inherited from Europe. African influence lies in the melody following speech tones and when the Calypso lampooned on leading characters in society. Carnival formalized calypso. Some calypso incorporate Spanish, Yoruba, Ashanti and Creole words which make it difficult for many Trinidadians to understand (plantation legacy) e.g. Mighty Sparrow, Soca is derived from calypso thus it is a blend of jazz from Deep South in USA with Calypso and use Indian instruments like Sitar, mandolin and tabla.

Music from Jamaica: mento, ska, reggae, Reggae's Jamaican folk music with the varying from militancy of black power, Rastafarian message to folk songs **French**

Music: Cadence, Beguine Cadence from Guadeloupe, Martinique and Dominica became internationally known in the 80s. Its appeal ranges from unemployed youth in the Caribbean to the rich young night club set in Europe. **Spanish music:** plenas, rhumba

IMPACT

- Steelband men or pannists have gone abroad and settled and have taught citizens and tune the pans. Today steelband music is on the curriculum of some schools in America and the fashioning of the pans is a growing skill, which has potential to contribute to the economies of these countries in North America and Europe. One saw over 600 pannists from Europe, North America and Caribbean taking part in International Steel band Festival. There is the Pan European Association promoter development of the pan in Europe.
- The staging of Reggae Sunsplash festival has caught on in all parts of the world Japan and North America attesting to the roots that reggae has spread to all parts of the world. Reggae is now incorporated into music of other countries e.g. Sayoko has Suki-yaki to reggae, in Nicaragua protest songs against the government.

- In Zambia, Sunsplash is staged in Lusaka each year. Reggae music is being used to market products like Levi jeans, it is being used in movies-and has been incorporated into other musical forms like Jan rock. The University of Vermont even has a course in the Rhetoric of Reggae.

FESTIVALS

. In the Caribbean Diaspora, festivals have come to play a big role in the lives of the migrants. In North America (Canada and USA), England and elsewhere, large Caribbean festivals are staged featuring our music, food, craft, fashion and general culture. At these carnivals **the parade** is made up of bands revellers dressed in costumes depicting a **common** theme, participants jump up to the music while competing for 'Band of the Year' title. Along with parade is the Calypso Monarch competition (best calypso performer). There is also a junior carnival competition - (inculcation of carnival traditions so it won't die)

NOTTING HILL CARNIVAL (England)

This carnival is staged in Notting Hill, London on the last weekend in August (since 1956). It began with the black immigrants from W.I especially from Trinidad. It served as a form of uniting the immigrants who were facing racism, unemployment, poor housing and general oppression which led to the suppression of their self esteem. (It grew out of demonstration/ street procession following the racially induced death of Kelso Cochrane a Jamaica.) Steel band was invited so as to appeal to the vast numbers of WI who felt alienated in the community. Soon calypso was joined by reggae making it a Caribbean blend. Notting Hill festival reflected a blend of old and new - the Caribbean carnival with the English summer. It became the vehicle for protest and demonstration on part of immigrant but later became the model for other different and smaller festivals. It helped to focus on and encourage respect for Caribbean traditions.

CARIBANA (Canada)

Every summer, Toronto (Canada) blazes with the excitement of calypso, steel pan and elaborate masquerade costumes during the annual Caribbean Festival. Caribbean is the largest Caribbean festival in North America. Presented by the Caribbean Cultural Committee, the two-week Festival attracts over a million **participants** annually, including hundreds of thousands of American tourists. Among the highlights is the Caribbean Parade, one of the largest in North America. Thousands of brilliantly costumed masqueraders and dozens of trucks carrying live soca , calypso, steel pan, reggae and salsa artists jam the 1.5 km parade route all day, to the delight of hundreds of thong include the King and Queen of the Bands Comjr-Caribbean Arts Festival.

Outdoor concerts and glamorous dances round out the entertainment. Caribana was created in 1967. Based on Trinidad Carnival, the Festival exhibits costumes of Jamaica, Guyana, the Bahamas.

slaves, under the concealment of disguise, brought their dances, their songs and their festival traditions to the streets, recreating in symbolic ways the freedom from the cane fields. This period was characterised by the participation of the "jamette" or underclasses, and by cross-racial costumes. Archtypical characters-devils, bats, royalty, indians and death figures - were gradually refined into such traditional favourites as the Jab Jab, Jab Molassic, Midnight Robber and pierrot Grenade (versions of which persist to the present day).

Throughout the mid-19th century, the middle and upper classes were extremely uneasy with this torchlight revelry. It seemed too bawdy, too raucous, and too liable to provoke riot and violence. Various measures were taken to prohibit public disorder, especially after 1881, when police and revellers clashed in the "Canboulay riot". As the turn of the century approached, however, Trinidad began to recognize that Carnival was here to stay. Official competitions were established, while some of the more provocative elements were suppressed. Merchants began to understand the economic benefits of an annual street celebration, and soon a wider segment of society - including people from all races and classes - were "playing Mas" (that is, dressing up in masquerade costumes). The early 20th century saw the dawn of the great era of Calypso, the steel drum was bom; a wedding of African ingenuity and the cast-oil industrial waste of foreign navies. The three art forms of Trinidad Carnival - masquerade or Mas', Steel Pan and Calypso - were developed as forms of social commentary that could criticize the law, the government or society at large without fear of punishment. Competitions in all three genres elevated the skill of their practitioners, so that today Trinidad Carnival is known by many as "the greatest show on earth."

Thus, Toronto's Caribbean Festival is a complex hybrid. It has inherited African, East Indian and European festival traditions from Trinidad and Tobago Carnival. Over the years Caribbean has also welcomed the festival traditions of members of many other communities that are now present in Toronto, including Jamaican, Brazilian, Cuban, St. Lucian, Guyanese, Bahamian, Antiguan, Barbadian and Dominican. Trinidad Carnival falls just before the Christian season of Lent, so that a time of excess and indulgence is balanced by a time for introspection and abstinence. Coincidentally, Toronto's Caribbean Festival falls on the anniversary of the emancipation from slavery in Trinidad (August 1, 1834), and also on the date of a European festival celebrating the first loaf of the New Year's wheat and the opening of the fields for common pasturage. These themes of liberation and renewal are essential to the Festival, and help to explain its enduring popularity. Meanwhile, Caribbean is still in its

infancy, even as it approaches its 35th anniversary. Its potent message for the rest of thi will continue to be spread for generations to come.

LABOUR DAY IN BROOKLYN (USA)

The West Indian American Day. Carnival is the biggest parade in New York with 3 million participants each year. The parade depicts elaborately designed costumes, illustrating beauty and pageantry. There are many masqueraders and huge sound trucks with live performers. The service roads have stands of vendors lined up selling foods, books, clothing, art, jewelry, and much more. The parade begins at 1 lam and ends at 6 There are live performers in front of the viewing stage at the Brooklyn Library. The pa rout begins at the comer of Rochester & Eastern Parkway and ends near Grand Army 1 where non-masqueraders can jump up with the bands.

There is plenty of food to taste on Carnival Day- various dishes from every Caribbean island. Large numbers of people are lined up along the service roads selling jerk chicken, chicken fried chicken, beef stew, oxtail, rice and peas, salad, macaroni pie, fried flying fish, cui goat, roti, callaloo, souse, salt fish, fried bake, coconut bread, and much more. Radio stations, newspapers, and word of mouth are the best ways to find out what ever maybe taking place carnival weekend. Newspapers like the Daily News contain a section called the Caribbeat, which features weekly events in the Caribbean-American community. Radio stations such as WWRL (1600am) inform the public of the different fetes and shows take place. They also play the latest soca and reggae music, to get in the mood for Can J'Ouvert or jour ouvert in French meaning daybreak, began in Trinidad in 1937. Toda; J'Ouvert is also celebrated in New York as a predawn festival on Carnival day.-In keej with tradition, steel drums are the only forms of music that will be played. Revelers in J'Ouvert wear costumes also, but unlike Carnival day, L'Ouverture costumes are inexpensive are often creations that mock political issues, celebrities, and prominent events.

During and after the Slave trade when many people were uprooted and transferred to the Caribbean Islands by force, their traditions were kept residually in their souls. These were then incorporated by slaves in La Trinity (Trinidad) and other Caribbean Island the French and other land owners settled. Parts of these festivities and celebrations called the French Mardi Gras. Therein lies the birth of Carnival in the Caribbean. However Carnival is continuously evolving and today bears no resemblance to the original. Spanish and British aristocracy held grand and lavish costume balls, feast and small street parades. Slaves were not permitted to participate. After the abolishment of slavery, thousands of freed slaves celebrated, by lampooning their

former masters and mimicking the dress and behavior of the European people. The character of Carnival changed - becoming more boisterous, noisy and disorderly while at the same time getting more colorful and spectacular with magnificent and elaborate designed costumes. The people of the Caribbean have exported their carnival traditions to Canada, England, several US cities. However the New York version of this celebration far exceeds any like celebration in the US.

Carnival In New York

Ms. Jessie Waddle, a Trinidadian and some of her West Indian friends started the Carnival in Harlem in the 1930's by staging costume parties in large enclosed places - like the Savoy, Renaissance and Audubon Ballrooms due to the cold wintry weather of February. This is the usual time for the pre-Lenten celebrations held in most countries around the world. However, because of the very nature of Carnival and the need to parade in costume to music - in door confinement did not work. The earliest known Carnival street activity was held during the 1940's when Ms. Waddle, a Trinidadian secured the first street permit for a parade type event on the streets of Harlem. During the 1960's, another Trinidadian - Rufus Goring, brought Carnival to Brooklyn: In 1967, Goring passed the reigns over to Carlos Lezama, who later became president of WIADCA and who nurtured the organization and carnival celebrations till 2001, when, due to his ill-health he retired and his daughter, Yolanda Lezama-Clark was elected president. Both lived in Trinidad during their formative years: -

"Labor Day Carnival Parade" has grown over the years from thousands of participants and tourists to over 3.5 million people in attendance since the mid- 1990's according to then Mayor Rudy Giuliani. The influx of tourists from all over the world has benefited New York City on an economic level, most recognizably with large corporations, small businesses and the tourist/service industry.

SOMETHING IS MISSING HERE – I CAN'T FIGURE IT OUT

against colonialism. According to Leonard E. Barrett Sr., author of *The rastqfarians*, Jamaica's African population "suffered the most frustrating and oppressive slavery ever experienced hi a British colony ... Under such complete domination two reactions were provoked: fight and flight.*¹ The Jamaican Maroons—African slaves, who, following the British defeat of the Spaniards in 1655, escaped to the mountains—waged guerrilla warfare against the British colonizers. In 1738 the British were compelled to grant them a limited freedom: although the Maroons were allowed their own lands and leaders, they were also required to police the plantation slaves, a duty which they accepted. Henceforth, the Maroons were loyal to the Crown. Plantation slaves took up the freedom movement Indeed, in 1831, under the leadership of the slave and Baptist religious leader Samuel:-. Sharpe, Jamaica's slaves waged a mass rebellion against the planters. Like Sharpe, many Jamaican slaves believed that God was calling on them to fight for their freedom—a messianic-vision partly influenced by Baptist and Methodist missionaries, who, during the mid-18th century, established churches in Jamaica and contributed to a syncretism of Christianity and the island's African religions. Although the rebellion was violently suppressed by the British authorities in Jamaica, it was one of the key factors in the British Parliament's decision to abolish slavery with a law that went into effect on -August 1, 1834.

In 1865 the Morant Bay Rebellion, another large-scale uprising of Jamaica's rural blacks against the colonial elite, forced political and economic reforms that diminished the power and privileges of Jamaica's Riling, white planter class. Jamaica became a crown colony. The British drew up a new constitution that removed direct rule from the hands of the local elite and gave decision-making power to an appointed British governor, who presided over .a legislative council. Yet the reforms only went so far, the overwhelming majority of council members, nominated by the governor himself, were white, and the gulf that existed between Jamaica's poor blacks (a significant majority of the island's population) and middle-class whites and mulattoes continued to widen. Jamaica's black population was systematically repressed until 1962; the year British colonial rule came to an end. Indeed, Jamaican blacks did not have the freedom to assemble or organize trade unions; abysmal working conditions led many to seek employment abroad. In 1914 the Jamaican worker Marcus Garvey founded the Universal Negro Improvement.

Moreover, Jamaica's economic crisis continued to worsen. Black workers, plagued by malnutrition and low wages, turned to practical action instead of religion as a form of resistance. Spurred on by these developments, the Rastafarian movement became increasingly politicized. During the 1940s and 1950s, leaders intensified their opposition to the colonial state by defying the police and organizing illegal street marches.

During the late 1950s, Claudius Henry, head of a Rastafarian meeting house in Kingston, set up a guerrilla training camp and in 1959 unsuccessfully tried to repatriate a group of Jamaican Rastas to Africa. Soon after, the police invaded Henry's headquarters, where they found a supply of arms and a letter inviting the Cuban leader Fidel Castro to take over Jamaica. Henry was arrested and tried on charges of treason. Throughout the 1960s, Rastafarian demonstrations against segregation and black poverty were violently repressed by the Jamaican police and military. While several Rastafari were killed in such clashes, hundreds more were arrested and humiliated by being forced to have their dreadlocks cut off.

Philosophically opposed to a culture of violence, many Rastafari soon turned to more peaceful means of resistance a goal considerably aided by the visit of Haile Selassie to Jamaica in the 1960's. which saw the mass of the black populace thrust forward to pay homage to the Ethiopian monarch. So profound was the popular feeling expressed for Africa that the Jamaican ruling class realized that it could not simply write off Rastafari. Rastafarian culture was explored and promoted in a plethora of academic studies in Jamaica and abroad, while the Ethiopian Orthodox Church was recognized as an institution worthy of respect. Rastafarianism also gained a new measure of credibility among Jamaica's middle-class blacks and mulattoes who, during the late 1960s, formed their own Rastafarian group, the Twelve Tribes of Israel.

In 1968, Guyanese university lecturer Walter Rodney started the Black Power Movement, which significantly influenced the development of Rastafarianism in the Caribbean. Black Power was a call to blacks to overthrow the capitalist order that ensured white dominion, and to reconstruct their societies in the image of blacks. In Dominica, Grenada, and Trinidad, Rastafarians played a central role in radical left-wing politics. In Jamaica, Rastafarian resistance was expressed through cultural forms, particularly reggae

organized Rastafari groups exist in Jamaica: the Bobos and the Twelve Tribes of Israel. The Bobos maintain a communal life on the fringes of Kingston, where they earn a living producing and selling brooms. The Twelve Tribes, on the other hand, is a predominantly middle-class group, led by Prophet Gad. Members of the Twelve Tribes accept the authority of designated group members, pay dues, and hold regular meetings and events. In addition, there is the House of Nyabinghi, a loosely organized assembly of Rasta elders, who settle disputes between brethren and organize events. "Beyond the Assembly of Elders," notes Chevannes, "there is no membership, as such. All are free to come or stay away, to participate or remain silent, to contribute or withhold financial dues the openness of this sort of structure permits a great measure of democracy, in which all are equal, regardless of age, ability or function." Rastafarianism remains a culture of resistance in many parts of the world. Although the Rastafarian movement has experienced a turbulent social history in Jamaica, it retains significant moral authority there, and its influence is increasingly felt beyond Jamaica. Indeed, it was one of the first full-fledged movements to confront issues of racial identity and prejudice, and to incite r£ Jamaica's middle-class blacks to reflect on the importance of their African heritage.

CUISINE

There has been limited acceptance of Caribbean culinary practices, foods, seasonings and beverages in mainstream America and Europe. The little acceptance there is tends to focus in the large cities where there are concentrations of Caribbean people- Miami, London, Toronto, New York. These food and products are largely purchased by the immigrants. Cultural diffusion of Caribbean foods maybe slowly seeping from the immigrant base to the wider public through friendship and visitors who are knowledgeable on Caribbean cuisine. Evidence that Caribbean foods are not widely accepted can be seen in the lack of representative in menus across UK, USA and Canada (mainly in Caribbean restaurants such as Bahamas Breeze, Tover Royale, golen crust, Caribbean Food Delights). The thought exists that with increase travel generation X and Y (18 - 34 yrs) have been so exposed and adventurous that ethnic restaurants are doing booming business moreso the cuisine that has a spicy kick to it. In Britain places like Brixton market imported Caribbean produce has become a familiar sight and an important part of the economy.

human dignity, sense of worth and respect. All people and societies seek some form of

self esteem, although they may call it authenticity, identity, dignity, respect, honour or recognition. The nature and form of this self-esteem may vary from society⁷ to society from culture to culture. However with the proliferation of the modernizing values of developed nations many societies in third world countries have had a profound sense in their own worth suffer from serious cultural confusion when they come in contact with economically and technologically advanced societies. This is because most universal measure of self worth is attached to material values in developed nations. Worthiness self esteem are now-a-days increasingly conferred only on countries that possess economic wealth and technological power; thus who are developed. • Increasing people's freedom by enlarging the range of their choice variables and by-increasing varieties of consumer goods and services. Here freedom is understood to mean emancipation from alienated material conditions of life and from social servitude to nature, ignorance, other people, misery, institutions and dogmatic beliefs. Freedom involves an expanded range of choices for societies and their members together with minimization of external constraints in the pursuit of some social goals we call development. Economist W. Arthur Lewis stressed the relationship between economic growth and freedom from servitude when he concluded that the advantage of economic growth is not that wealth increases happiness but that it increases the human choice. Wealth can enable people to gain greater control over nature and the physical environment e.g. through the production of food, clothing and shelter than they would have if they were poor. It also gives the freedom to choose greater leisure, to have more goods and services or to deny the importance of these material wants and live a life of spiritual contemplation. This concept of human freedom should also encompass various components of political freedom including personal security, the rule of law, freedom of expression, political participation and equality of opportunity. To study development therefore involves looking at both the economic as well as the non-economic progress made by individuals as well as societies.

the cheapest and-most timely route from raw material to finished product. Essentially, productivity is a ratio to measure how well an organization (or individual, industry, country) converts input resources (labor, materials, machines etc.) into goods and services. This is usually expressed in ratios of inputs to outputs. That is (input) cost per (output) good / service. It is not on it's own a measure of how efficient the conversion process is.

The *Productivity Conceptual Model* (see Appendix) takes the form of a 'productivity tree'. The roots denote the inputs to the system, the trunk the conversion process and the foliage and fruits the systems outputs. The successful management of this process is ultimately the key to survival of any organization. It should be the concern of and a development goal for, all organizational members, irrespective of their position. To raise productivity domestic savings and foreign finance must be mobilized to generate new investment in physical capital goods and build up the stock of human capital through investment in education and training. Institutional changes are also necessary to maximize the potential of this new physical and human investment. These changes might include diverse activities such as reform of land tenure, corporate tax, credit and banking structures, the creation/strengthening of an independent honest and efficient administrative service and restructuring of educational and training programs to make them more appropriate to the needs of the society.

These and other non-economic inputs into the social production must be taken into account if strategies to raise productivity are to succeed. Level of productivity is attributed to quality of human resources, the organization of the production system, then institutional arrangements undertaken to accelerate their productive growth. Evidences of rise in production can be measured by the number of industrial action taken by workers, absenteeism through sick leaves etc, employment level, rise in export hence foreign exchange earnings, pace of industrialization, and a favourable balance of payment,

Increase in modern knowledge refers to the influence of 'modernizing' institutions such as schools and factories, which are thought to promote urban, industrialized societies. Such knowledge emphasizes efficiency, cost effectiveness, rationality, logic, planning technological know-how, and organizational skills. Surveying the number of schools and factories in a country and comparing it internationally can measure this.

Social and economic equalization: this refers to the difference between social classes in terms of income earned and the quality of life experienced. If each social group in a country moves closer together in terms of the kind of lifestyle they experience there will be less of a gap in those having higher status jobs and those not having those jobs. Equity is difficult to achieve in region because of historical circumstances (many of the social and cultural institutions continue to support the status quo - racial and class prejudice against certain groups which affect whether they are hired or fired), political realities (political power supported by elites who will actively withdraw their support if their policies are enacted to make the poor 'well to do' and the rich less so).

Inequity is maintained as historically poor people were able to access social mobility and move towards wealth re distribution through education. However majority of students leaving schools with credentials are poor - low income, low status jobs or no jobs. Education system has historically been oriented towards an elitist education and had done little to improve low ability, low SES students. In addition social stratification inherited from colonial days remain intact. Status quo remains intact and even though accessing wealth is meritocratic there is still selective hiring and firing that discriminate.

Redistribution of wealth is difficult as economic and political ideologies support capitalism and free enterprise. Surplus wealth of elites is not distributed among workers but serves to expand production. Elites (wealth, status, prestige and power) control political power. Political policies therefore support economic and labour market practices maintaining status quo.

Inequities are maintained because of urban bias. - Historically towns, ports and capital cities have experienced development rather than rural hinterland. Today still that concept- personnel, opportunities and resources are concentrated there and this increases differential in quality of life a between town and country. There is relatively little rural development to help poor rural folks to earn comparable income to those in towns. Caribbean countries are involved in exploitative relationship with capitalist countries. Developing country' is unequal partner in the relationship therefore the ability to redistribute wealth is not wholly in the hands of Caribbean countries. Measures to bring about social and economic equalization often involve deep seated changes in society- redistribution of lands- and such policies can bring about civil unrest especially from those groups losing their privileged status and those seeing themselves as being denied status.

FACTORS THAT PROMOTE OR HINDER DEVELOPMENT

Political ideologies

This fosters fragmentation and makes countries vulnerable to external interference in domestic affairs of the countries e.g. Grenada, also limits the extent to which countries are able to forge a coordinated foreign policy. On the other hand the region has been able to maintain stable and democratic governments, which have provided opportunities for economic stability and favourable investment climate e.g., Barbados & EC states

The political ideology that a government embraces can have a profound impact on development. The capitalist system or free enterprise is the preferred choice of most Caribbean states. This ideology is intricately connected to the world's capitalist system and therefore Caribbean states, which embrace this philosophy, receive a stamp of approval from the first world countries of the World Capitalist System. Countries of the Caribbean which practise/embrace any other forms of ideology (planned economic system) receive little or no support from the major capitalist countries of the world and so they find it extremely difficult to embark on a development path. E.g. Cuba (economic blockade by USA; Grenada which embarked on a socialist path was invaded by USA in 1983 and the government overthrown. Jamaica under Michael Manley was destabilized by USA and suffered great economic hardship because of its decision to pursue an ideology known as democratic socialism in 1970s)

Distribution of wealth

If wealth is unevenly distributed then this can hinder development. When concentrated in the hands of a few it can lead to low level of investment, high unemployment, high level of unskilled labour force as there is low expenditure on education. It can also result in corruption. As a consequence there is low productivity among high-income earners, capital flight and brain drain. It leaves government with a high borrowing from international sources, which results in higher taxation rate and rising inflation. To solve this, incentives for production have to be offered to attract investors and government has to increase its involvement in areas such as infrastructure! development, education, minimum wage, high tax on luxury items, harsh penalties for offenders, better auditing and accountability. Most countries of the Caribbean esp. Jamaica display an inequitable distribution of wealth (skewed distribution. In Jamaica it is skewed in favour of the ruling class, which consists of large landowning families, local capitalists, international capitalist and a small number of strategically placed professional managers. These classes of people in Jamaica control the

commanding heights of the economy (in 1970s less than 1% of the population controlled 70% of the wealth in the economy. Majority of the wealth concentrated in the hands of 21 families
The repercussions of this for development:

- It facilitates some form of development (economic but not holistic). It facilitates enclaves
- Produces antagonism between workers and managers/owners
- Fosters alienation, which can lead to revolution if not addressed. People become

alienated from the productive forces of the country because

they enjoy very little of the wealth of the country

they are forced to pay burdensome taxes like GCT

they have corrupt political leaders

most vulnerable in society become hopeless

the majority of the people have no stake in the economic wealth of the country
without a leader to speak for them there can be no change

Changing class boundaries

If within society there are no avenues or scope for social mobility then this can lead to antagonism as people will see themselves as inferior as or less important than those who occupy higher status. A rigid class structure breeds insecurity/ mistrust and this can have a negative impact on development. Some avenue for upward social mobility must exist to reward people who are industrious, visionary and productive

DEFINITION OF THE CARIBBEAN

(See module 1: Caribbean society and culture - Historical Processes)

The countries of the Caribbean are frequently affected by natural disasters such as earthquakes, volcanoes and hurricanes. Over the past 200 years the region has been affected by 8 major earthquakes, which have resulted in 16000 deaths. Similarly volcanic activities have been constant especially in the Lesser Antilles. Most of the countries v/within the region lie within

the hurricane belt making the hurricane season a constant reminder to Caribbean people of the physical constraints we face. These natural disasters have contributed to tremendous financial burdens to the region as a result of damage to property, infrastructure

and economic sector such as agriculture and tourism (the mainstay of the economies of almost all the territories). As a result of these disasters occurring, governments have to change ■•developmental plans in order to deal with the short term or immediate situations - reconstructing roads, buildings, restoring agriculture, utilities and so funds earmarked for developmental projects have to be diverted to immediate needs and this hinders development. (See module 1: Geographical Phenomena- Earthquakes, volcanoes, hurricanes, and drought)

Tourism

Smallness of size: Except for Guyana and Belize CARICOM countries are relatively small and mountainous (Plate tectonic/volcanic activity). This has resulted in high population densities. This causes a scarcity of large areas of flat land for agricultural production and so the region has become large importer of food. The other factor is high densities esp. in urban centers - traffic congestion, pollution, slum development negative social conditions.

Fragmentation: highly fragmented, countries spread out Belize in west, Guyana in south Barbados in east and so communication is restricted, prevents free movement of people from one country to another, and creates constraint on cost of moving resources and goods within the region ;

Resource endowment: absence of mineral, forestry and other resources in most territories. This has placed some limitations on development strategies and options. Except for Jamaica, Guyana, Trinidad and Belize, a lack of resources prevent production and the resources available to all allows for production of the same products hence difficulty in finding markets

Proximity to USA: this allows for easy penetration of NA culture and lifestyle- cultural imperialism. This is detrimental as it stifles local/regional initiatives and introduces unwanted social habits.

OPPORTUNITIES

Congenial climate: tropical marine - warm with long spells of bright sunshine. This attracts tourist from around the world

Absence of large rivers means less silt deposits along coastline. This allows beach to remain unpolluted, reduction of threat to coral reefs

Coral reefs promote tourism

Smallness - attractive to tourists who want to escape hustle and bustle of large conurbations

Fragmentation: maintenance of cultural diversity- cultural richness attracts tourists - carnival crop over mashramani

Proximity to USA — region can tap in large tourism market

Cultural & socio economic conditions

Cultural pluralism- ethnic diversity makes it difficult to foster a truly single Caribbean identity,, lead to misunderstanding,, suspicion, racial insecurity and disturbances On the other hand facilitates a broader mix of ideas and experiences that can support development initiatives and activities, promote rich cultural heritage

Small ness of size: limit consumption patterns, production options and demand and supply of commodities also restricts production of some commodities at the same time the smallness of economies allows for avoidance of the more intractable problems experienced in mass production and high consumption societies e.g. pollution, high crime rates, social and cultural alienation

Regional Economic problems

Despite the many efforts made by the region to deal with economic development, there are still many problems with which the nations have to grapple

- high "unemployment due to the fact that many people are untrained. There is a great demand for skills training but educational institutions focus on theoretical aspects of schooling ,)
- some countries are unable to attract foreign investment because the political and social conditions are not considered right or sufficiently stable
- insufficient number of local businesses
- inadequate supply of foreign currency needed to purchase raw materials for the manufacturing sector •
- overpopulation puts pressure on the social services sector.

Human behavior and Development

a. Population growth takes place as a result of natural increase or net migration. In the Caribbean this is associated with high rates of natural increase rather than migration (migration tends to act as a safety valve). Natural increase results from an excess in births over deaths. In Caribbean birth rate is estimated to be between 27 and 36 per 1000 of population. Death rates on the other hand are lower. This is attributed to the tremendous improvement in medicine, hygiene, sanitation, recreation and nutrition. This translates into less people dying and more living longer. In addition life expectancy has also increased tremendously. When reflecting on issues of population growth in Caribbean one has to consider the traditional Caribbean attitudes towards family life, marriage, sexual relationships, child bearing and women's role in the home. Having children is an important cultural value. High birth rates translates into a young population (fertility levels are high). Marriages and consensual relationships tend to occur from very early in life. Even though birth control has been heavily promoted, attitudes remain ambivalent. The best method of curbing rampant

population growth is to educate the women and facilitate their entry into the labour market (higher education seems to increase awareness of options and choices for women beyond the traditional. The different roles (wife, mother, career, own person) force women to make practical choices such as limiting size of family. Large population create strain on resources - schools, health services, employment which become hindrance to development

b. A predominance of young people creates an unhealthy dependency ratio, (the less persons dependent on you the better you are able to enjoy a higher standard of living). In the Caribbean there is a huge struggle for working population to provide for their dependents. Governments are forced into providing basic needs therefore there has to be a cutback on development programmes such as job creation, provision of services and building infrastructure. Providing for large population puts pressure on land. Carrying capacity is exceeded, inappropriate farming techniques are used and marginal lands (hilly) drawn into cultivation on a regular basis. These lands have to be carefully cultivated to reduce effects of fertility loss and soil erosion (see pages on over grazing, deforestation, contour ploughing, slash and burn)

c. **Urbanization** (growth in the number of persons living in towns). This can be through rural- urban migration and the high birth rates of urban residents (in migration and natural increase). In the Caribbean there is high level of urbanization (65%); urban centres have very high densities which threaten carrying capacity of the land. Migrants to city find, shelter in ghetto, shanty towns, slums and squatting sites. In these sprawling urban centres poor and substandard housing, unreliable clean water, or sewage and garbage disposal become a fact of life which impact on health and well being of migrants. In Caribbean it is a common cultural value that even though life might be difficult in towns it is preferred to life in a rural area. The behaviours associated with population growth, agricultural land use patterns and urbanization can be traced to our colonial history and the ways in which the territories were involved in forms of economic exploitation. A consistent pattern found throughout the region is related to how the Europeans organized their system of production. They invested primarily in plantations on flat fertile plains where they built up roads and linked them to ports to export raw materials to Europe. This was tied to industrialization in Europe where we supplied raw material and they supplied finished products. Ports and capital cities therefore became the focus of development. Heavy investments were made in infrastructure, administrative machinery, commercial enterprises, education and housing. Today there is still clear evidence of this. Cities are overlarge, have concentration of economic opportunity, facilities amenities

and services which serve as major pull factors for migrants. The dark side to this is the underdevelopment of the interior of the colonies/countries

Glossary of terms

Capital accumulation: Increasing a country's stock of real capital (net investment is fixed assets). To increase the production of capital goods necessitates a reduction in the production of consumer goods. Economic development depends to a large extent on the rate of capital accumulation. The more capital goods a country has is another hallmark of development. Development is based on the country's ability to save. Savings can be used to re-capitalize the country

Common market: this is a step beyond a customs union. In addition to internal free trade and a common set of external trade barriers there is free movement of capital and labour within the common market.

Customs union: this is a step beyond a free trade area. Not only is there free trade among member countries, there is also a common external tariff and a common set of quantitative restrictions against outside countries

Dependence: situation in which LDCs have to rely on developed country's domestic and foreign policies to stimulate their economic growth. Dependence can also mean the LDCs adopt developed country's education system, technology, economic and political systems attitudes, consumption patterns, dress etc

Disposable income: the income that is available to households for spending and saving after personal income taxes and other salary deductions are made

Economic Union: this is the highest form of economic cooperation among countries. In addition to a common market, there are common economic, financial taxation and social policies. Because of the high degree of corporation between countries involved, an economic union comes very close to a political union

Enclaved societies: less developed countries in which there are small pockets of economically developed regions (often due to the presence of colonial or foreign firms engaged in plantation or mining activities) with the rest of the larger outlying areas experiencing very little progress.

Fixed inputs: inputs that do not vary as outputs vary e.g. a hectare of land is a fixed input in a small family farm because it can be used to produce different quantities of crops without the

size of the land changing

Social Cost: the cost of an economic decision (whether private or public) to society as a whole.

Where there is external dis-economics of production e.g. pollution or consumption, social cost will normally exceed private cost and decision based solely on private calculation will lead to misallocation of resources

Trickle down Theory of development: the notion that development is purely an economic phenomenon in which rapid gains from the overall growth of GNP and IPC would automatically bring benefits(trickle down) to the masses in the form of jobs and other economic opportunities. The main preoccupation is therefore to get the growth job down while problems of poverty, unemployment and income distribution are perceived to be of secondary importance

Under development: economic situation, in which there are persistent low levels of living along with absolute poverty, low income per capita. Low rates of economic growth, low consumption levels, poor health services, high death rates, high birth rates, dependence on foreign economies and limited freedom to choose among opportunities that satisfy human wants

Globalizations

The process that results in the creation of a global market and economy is characterized by :

- the world being one huge market
- use of the most advanced technology
- creation of competitive world market
- Resource and Technology as the most valuable source
- more controlling power as technology advances
- capitalist states control world's economy

Impacts

- region forced to adopt liberal economic model or be left out in the cold
- © Increased access to markets for goods
- Free movement of capital
- Erasure/hybridization of culture, values and norms (foreign media influence)
- No preferential trade agreement
- Increase in inequality of income distribution
- Destruction of local production base
- Forces local businesses to become efficient

Multinational / Transnational Corporations

This is a business organization/corporation /enterprise that has its headquarters (parent company) in one country (usually advanced capitalist/industrialized countries) and has branches/subsidiaries/franchises and plants in many countries (capitalist companies with branches world wide). They seek out the best profit opportunities and are largely unconcerned with issues such as poverty, inequality and unemployment alleviation. Such organizations carry out substantial amounts of financing, production sales research and development in their foreign operations. They have great economic power (large capital base such as cash, stocks bonds and technology). They are usually based on manufacturing or mineral industries (extractive and primary industries) and operate in fields that involve frequent technological change. Such firms have a large research organization at its headquarters base where they develop new products and processes. They then train workers in

foreign plants to use these skills. Some MNCs grant foreign companies licences to use their methods and processes instead of setting up plants of their own. A MNC may have few^r plants in one country that produces complete products to be sold in several countries while in other cases the plants in many countries may produce components or parts of the finished products. This gives MNCs a larger area from which to choose the most economical locations for specialized plants. The companies can then sell products at lower prices than would otherwise be possible. Firms develop into MNC in order to

- obtain control over the supply of resources,
- take advantage of the lower costs of foreign labour and material,
- avoid paying tariffs on imported goods
- and to avoid high production costs and taxes associated with certain operations in the home country.

They invest heavily in Third World Countries providing that their demands are met which usually include:

- large pool of cheap labour
- tax. holiday on production-
- freedom to bring in all sorts of goods needed
- provision of proper irrfjrdi>irueiuc
- politically stable country
- freedom to repatriate profits
- freedom to recruit professionals from outside the country.

Because these companies are wealthy and powerful they usually get their demands met because the governments of third world (developing countries) are always striving to provide jobs for its people. If demands are not met to their satisfaction they will complain to their home government'who in turn apply pressure to the country concerned. This may take the form of

- withholding foreign aid
- withholding loans
- cancellation of contracts
- withdrawal from projects
- sometimes even open de-stabilization

\

Benefits of MNC to the Caribbean region

- provides jobs
- transfer of technology of productions which we don't have
- diverse business practices
- managerial philosophies
- attract other foreign investors
- exploitation of raw materials (in some instances)
- offers variety of goods and services
- provides revenue to government through taxes
- provides social benefit such as scholarship, recreational and health facilities
- earner of foreign exchange

Disadvantages

- poses a threat to local industries
- creates social cost - pollution
- repatriation of profits to home base
- imports raw materials (in some cases)
- creates competition among countries in region who are vying for MNCs.

(RP AT> Tedarc's "Eor,oikiie Development"¹ pages 634 -644)

International Monetary Fund (IMF)

This is an international lending agency/organization based in Washington that provides short term credit to its 184 members. Plans for IMF were drawn up in at 1944 at the Bretton Woods Conference (New Hampshire) and began operation in 1947. It's a specialized agency of the United Nations but in practice Japan, UK, USA, Germany France and Saudi Arabia govern the fund. The fund was established

- to encourage international cooperation in the monetary field and the removal of foreign

exchange restrictions

- to stabilize exchange rates
- to facilitate a multilateral payments system between member countries .

In formative years it acted as a meeting place for industrial nations to discuss their trade relationship and financial dealings with one another. Since 1970s it has shifted to the economic problems of developing (third world countries)

IMF worked to maintain orderly payment arrangements between countries and to promote growth of world economy without inflation. It supports free trade in goods and services. To stabilize economies of its members, the IMF provides policy advice and short term loans when a member encounters financial difficulty. To receive loans members must usually change national economic policies like devaluing its currency so that exports can be competitive in world markets, cut social welfare programmes, reduce budget deficit to reduce inflation. This usually result in short term political unrest, economic hardship within the country. On the other hand the long term benefit include stabilization of the economy, less inflation helps to reassure private banks and investors about the safety of investing in the country.

World Bank

Also known as the International Bank for Reconstruction and Development, it came into being following the Bretton Wood Conference in 1944 and began operation in 1946.

World Bank provides long term loans to assist economic development. In its early years. it was engaged in helping to finance the reconstruction of war damaged Europe.

Nowadays its main role is to channel flows of capital from the rich countries of Western Europe, North America, Japan and the rich oil producers to the poor and mainly agricultural countries of Africa, Asia and South America

It finances projects such as infrastructural development (road, communication, power stations, water supplies, irrigation and rural development, as well as health care, education etc. Its financial assistance takes the form of long term loans. In addition to financial help it can offer a variety of financial and technical services to developing countries. Its

engineers, surveyors, accountants, economists and other experts help countries plan and implement their development projects.

World trade Organization

WTO came into being January 1995 as replacement to GATT (in existence since the formation of IMF and World Bank). Its main functions are:

- administering WTO trade agreements
- providing a forum for trade negotiations
- handling trade disputes
- monitoring national trade policies
- providing technical assistance and training for developing countries
- cooperation with other international organizations.

BENEFITS OF WTO

- Helps promote peace ! >
- Handles disputes constructively
- Rules make life easier for all
- Freer trade reduces Cost of Living
- Provides more choice of products and qualities
- Trade raises incomes
- e Trade stimulates economic growth :
- The basic principles make life more efficient
- .Governments are shielded from lobbying
- System encourages good governance

Impact of Foreign AID

- Funds tied to SAP(Structural Adjustment Policies) where the Caribbean countries are forced to limit spending on 'non-productive' investments such as health, education, social welfare programmes. This can jeopardize the quality of life of the citizens.
- Caribbean countries lose their sense of autonomy as lending agencies has the main say in how the aid is spent e.g. which tenders to accept for the project
- Provision of aid creates a cycle of dependency which becomes difficult to break out of.
- Aid is sometimes turned on and off depending on the political and strategic agenda of the donor. This makes funds unpredictable - interruption in development programmes.

Many aid agreements are tied to the purchase of goods and services from the donor country/agency. This might not be the best or the most economical

Can cause countries of the region to postpone improving economic management and mobilization of domestic resources

Aid might result in the transfer of inappropriate technology or the funding of environmentally unsound projects

The international movement

Integration: the functional co-operation and interaction towards a common goal,, operating as an effective community.

■ JI3/VN*

^

West Indies Federation (W.I.F.) came into being January 1958 following * «^ ^ Montego Bay

Conference in 1947 and subsequent meetings in 1953, 1956, 1957. Legislatures of all British colonies in region, except Bahamas, met and a regional economic committee

ly~ s^~were set up to investigate means of achieving economic unity. A Standing Closer " * *r> -<*J association Committee was also set up to devise a federal constitution. Final agreement was V^o reached in 1957. Imperial government retained responsibility for defence, external affairs and financial stability. There would be a senate of 19 nominated members and a House of Representative of 45 elected members. There would be a Governor General, Prime Minister and 10 ministers. The federal seat of government would be in ^ Trinidad. Elections were held in March 1958 with the West Indies Federal Labour Party (WIFLP) supported by NWManley, ■ Eric Williams and Grantly Adams defeating the Democratic Labour Party (DLP) supported by Bustamante and Gomes WIFLP 26 to 19 seats. This integration step was mainly a political one but lasted only four years. The aims of WIF

- strengthen the movement for self government,
- promote economic development
- safe guard the democratic system against dictatorship and communism The

achievements

- facilitation of the movement from colonialism to independence,
- the coming together of smaller states made their effectiveness in dealing with ' • international bodies such as UN stronger

Federation broke up in 1962 officially due to

- lack of knowledge on the part of the masses re the importance of a federation;
- inefficient communication system among islands

i

^vj^>JiLur

V

Envy and jealousy among member states due to differences in level of economic development
Distrust by smaller states of the larger states proposal to change constitution of federation.

2. **CARIFTA** (Caribbean Free Trade Association) came into being 1968 following the Dickenson Bay Agreement signed in 1965. Membership included former federation member as well as Belize.

Aim was to promote economic and social development in the region by encouraging free trade among members. This meant removal of custom duties, taxes and licensing arrangements which had prevented greater volume of trade among the territories. ,

Benefits

- region open up to free trade,
- a larger market and enhanced economic growth

As a result of the benefits accrued, cooperation under CARIFTA was deepened and evolved into CARICOM. (Caribbean Community/Corrimon Market)

3. CARICOM y came into being with the signing of the Treaty of Chaguaramas signed July 4, 1973 by Jamaica. Trinidad, Barbados and Guyana It began operation on 1st August. Presently membership includes CARIFTA members as well as Haiti and Suriname. Main

objectives

- improvement in economic development through trade liberalization (removal of trade barriers)
- functional cooperation in areas such as health, education, culture, broadcasting, transrx meteorological services, technical assistance, disaster management
- Common policies in dealing with non member states and transnational companies.

Benefits:

- services offered by various institutions
- economic strength as resources are pooled,
- better negotiations with trading partners,

- larger market for individual states,
- stronger persuasive voice in global matters,

- stronger Caribbean identity,
- better appreciation of cultures,
- benefits of talents of individual member states,
- establishment of CCJ as well as CSME

Failures:

- competition among member states in air transport,
- £ • WISCO plagued by problems
- ideals of common currency and passport still not achieved

4. ORGANISATION OF EASTERN CARIBBEAN STATES (OECS)

The Organisation of Eastern Caribbean States (OECS) came into being on June 18th 1981, when seven Eastern Caribbean countries signed a treaty agreeing to cooperate with each other and promote unity and solidarity among the Members. The Treaty became known as the Treaty of Basseterre, so named in honour of the capital city of St. Kitts and Nevis where it was signed. Following the collapse of the "West Indies Federation, and prior to the signing of the Treaty of Basseterre, two caretaker bodies were created: the "West Indies Associated States Council of Ministers (WIS A) in 1966 and the Eastern Caribbean Common Market (ECCM) in 1968. As the islands gained their independence from Britain it became evident that there was need for a more formal arrangement to assist with their development efforts. So it was that the OECS was established. The WIS A Secretariat became the central secretariat of the OECS and the ECCM, the Economic Affairs Secretariat. In mid 1997, as a result of restructuring of the organisation the Economic Affairs Secretariat was merged into and became a Division of the OECS Secretariat in St Lucia. The OECS is now a nine member grouping comprising Antigua and Barbuda, Commonwealth of Dominica, Grenada, Montserrat, St Kitts and Nevis, St Lucia and St Vincent and the Grenadines. Anguilla and the British Virgin Islands are associate members of the OECS.

The mission is to be a major regional institution contributing to the sustainable development of the OECS Member States by assisting them to maximise the benefits from their collective space, by facilitating their intelligent integration with the global economy; by contributing to policy and program formulation and execution in respect of regional and international issues, and by facilitation of bilateral and multilateral co-operation.

The Organization's Objectives (As set out in the Treaty of Basseterre[^])

- To promote co-operation among the Member States and the regional and international level;
- To promote unity and solidarity among the Member States and to defend their sovereignty, territorial integrity and independence;
- To assist the Member States in the realization of their obligations and responsibilities to the international community with due regard to the role of international law as a standard of conduct in their relationships;
- To seek to achieve the fullest possible level of harmonization of foreign policy among the Member States; to seek to adopt, as far as possible, common positions on international issues and to establish and to maintain wherever possible, arrangements for joint overseas representation and/or common services;
- To promote economic integration among the Member States
- To pursue these purposes through its respective institutions by discussion of questions of common concern and by agreement and common action.

The OECS is administered by a Central Secretariat located on the Morne, Castries, St Lucia. The Secretariat is headed by the Director General who is responsible **to** the Authority. **Over** the years several subsidiary and autonomous institutions have been created. The Islands share **a single currency**, the Eastern Caribbean Dollar (\$2.70 ECD = 1 USD). The operation of the currency is overseen by the Eastern Caribbean Central Bank, the monetary authority for the seven OECS governments and the government of Anguilla (The British Virgin Islands uses the US Dollar as their de facto currency). They also share a **common Supreme Court**: The Eastern Caribbean Supreme Court with its two divisions, the High Court and the Court of Appeal. The Supreme Court is headed by the Chief Justice. High Court judges are based in each Member State, but the judges of the Court of Appeal are resident in St Lucia and travel to each territory to hear appeals from the High Court. Final appeals go to the Privy Council in the UK.

Their Achievements to date include: common currency, common strategy towards development, a common central bank, a common high court, joint stock exchange, OECS

ASSOCIATION OF CARIBBEAN STATES (ACS) came into being 1995

by the Treaty of Cartagena (Colombia). This grouping is made of English, Spanish, French and Dutch speaking territories of the region with the secretariat located in Trinidad. It constitutes a much larger market of over 210 million people. -

Aims

- . to strengthen cooperation and integration through increased economic activity through trade(raw materials and finished products),
- preserve environment thus ensuring sustainable development,
- © Develop external economic relations. *

Achievements:

- established sustainable Tourism Zone of the Caribbean,
- regional cooperation in natural disasters,
- uniting by air and sea to facilitate trade and tourism,
- cooperation in science and technology,
- Promoting the teaching of the official languages of ACS.

FACTORS PROMOTING REGIONAL INTEGRATION

- Close proximity to each other through air and sea travel
- Shared common history
- Shared common culture in terms of dress, language, cuisine, music and general lifestyle
- Similar economic, political and social problems (unemployment, few physical resources, lack of adequate capital, poor housing, inadequate health facilities etc.

FACTORS HINDERING REGIONAL INTEGRATION

- Different strategies for economic growth
- Territorial interests supercede regional interest
- Some concessions to foreign investors run contrary to CARICOM objectives
- Stifled regional trade due to similarity in products
- Separatism and particularism: until recently distrust, self interest and disunity among

Anglophone, francophone and Hispanic

- Poor communication among territories (more developed with imperial homeland) bonded Anglophone but divided from Hispanic and Francophone
- Geography: islands separated by great distances... many have 'small island mentality')

BENEFITS OF INTEGRATION

Growth of intra regional, trade

Flow of financial resources from MDCs to LDCs

Flow of technical assistance from MDCs to LDCs

Joint development of basic natural resources for regional use

Cooperation in non-economic areas such as health, education, disaster management

Establishment of common services

Overall improvement in employment and standard of living in the region

Greater self reliance to increase production and consumption of locally grown food

Greater sense of solidarity and fraternity

Greater bargaining power as a region when dealing with extra regional organizations such as EU

Greater sense of unity through cultural exchange e.g. CARIFESTA

INSTITUTIONS IN THE INTEGRATION MOVEMENT

University of the West Indies

Established 1948 on the recommendation of the Irvine Commission and was affiliated to London university. The first campus was established at Mona in Jamaica, later expanded with opening of St Augustin (1960) and Cave Hill (1963) campuses. Became known as UWI in 1962 (prior to this it was UCWI). More recently 11 centres have been established in non campus territories. Offers full time, part time and distance education. Funding comes mainly from governments of the region and fees.

UWI takes care of tertiary system of education in the region. It brings regional cooperation through the various courses offered, from certificate to post graduate level to meet the various needs of the English speaking Caribbean. Recently the institution embarked upon an

expansion programme as well as programme diversification in order to serve the needs of the

region better and thus make a bigger contribution toward economic growth and development, UWI faces challenges from

- Foreign universities which offer degrees by distance teaching
- Off shore universities
- individual governments which see need for a local university ■
- expansion to increase percentage of graduates from 10 - 20%
- allowing children of poor to acquire tertiary education while governments insist that students pay a portion of costs

UWI enhances regional integration and development by

- offering a curriculum which is relevant to the needs of the region
- producing skilled personnel in business, government and industry >
- producing people who are committed to the region ® by developing science and technology
- by producing research which contributes to development of private sector
- by producing research which helps in solving society's problems
- by raising level of innovation and entrepreneurship in the region -
- breaking down barriers and dispelling ignorance and prejudice of and towards other nationals
- forges lasting friendships and family relationships

Caribbean Examination COUNCIL CXC

CXC was established in 1972 to serve as regional examining body for the secondary education system. Caricom members as well as other English speaking territories have their secondary school graduates examined by CXC on an annual basis. CXC offers secondary level certification, advanced proficiency and associate degrees. It ensures that the education of the Caribbean people is geared towards the needs of the region thus fostering economic development; examination by the region, of the region and for the region; syllabus reflect learning from a Caribbean perspective.

CXC creates employment opportunities: administrators, curriculum officers, measurement expert, content specialist's markers, supervisors, examiners. Through CXC foreign exchange is kept in the region rather than going to England. UWI creates interaction among peoples of the region. Regional integration, awareness of commonality, sense of brotherhood

Caribbean tourism organization CTO

This organization was launched in 1989 with the merger of CTO and CTRC. Its main aim is the development of sustainable tourism in the region (economic and social benefit). This they have done through

____ •.... tourism marketing ,,. ----- , ----- — —.....

- , research and information management
- human resource development
- product development and technical assistance
- consultancy services.

Achievements of CTO include

- annual conference on tourism held in the Caribbean
- sponsoring trade shows in Europe
- CTO chapters in major markets in Europe and North America
- maintain tourism information for the public and private sector
- maintain up to date websites where information can be accessed
- advertise Caribbean as one destination

Challenges

- getting governments to become more ware of their need to support tourism
- changing the perception of the public so that tourism becomes more acceptable as an economic entity getting a greater share of tourist market
- getting local operators to refine their product

West Indies Cricket Board

This was established in 1925 (makes it one of the oldest examples of regional cooperation) to establish and sustain West Indies cricket as the porting symbol of the West Indies as well as to develop and promote WI cricket for the benefit and enjoyment of the West Indies people, clients and other stakeholders. The board controls, regulates and arranges cricket in the region through competitions (under 15, under 19, eniorsO, setting up of an academy (St. Georges

University in Grenada). It consists of a president, two members from each of Trinidad, Jamaica, Barbados and Guyana and one from the other territories. Its functions include

- selecting a cricket team to represent the region in international competitions (tests and onn

arrange inter territorial matches (under 15, under 19, Carib Beer Cup etc)

■-.-• choose suitable umpires for matches ■■■..... "■■-*

.....-.....-**The-CSME** is a single enlarged economic space created through the removal of-
restrictions and resulting in the free movement of goods, services, persons (artistes, media workers, university
graduates, sportspersons, musicians), capital and technology. It confers the right on CARICOM nationals to
establish business in any CARICOM member state and to be treated in the same manner as a national of that
state.

The main pillars of CSME are the provision for free movement of capital; free movement of goods, services and
people (use of IDs/other form of identification, CARICOM National line at ports of entry, common passport)
within CSME; the establishment of common trade and economic policy; harmonization of economic, fiscal and
monetary policies (foreign exchange controls abolished no restrictions on Capital market activity, companies
will be able to operate across border); a common currency.

Under CSME benefits will include goods being traded in free market conditions, people of approved categories
are moving freely, capital is moving, increase inflow of new capital, entrepreneurship and technology, larger
market opportunities, greater opportunities for travel, study and work in CARICOM countries, increased
employment opportunities and improved standard of living secure platform for entry into FTAA, greater
economies of scale-pan Caribbean Brands, strengthened competitiveness, lower consumer prices, creation of
regional companies, increased opportunities to invest through direct stock ownership or mutual fund investments
CSME tests our capacity as a region to do what is necessary. Globalization presents harsh reality for small
states. The survival of Caribbean hinges on our preparedness to face open international competition and to
adapt to technological developments

Sports in the Caribbean

- The region has a very strong heritage in sports at the local, regional and international level- teams/individuals have distinguished themselves in several sports over the years at amateur and professional level; Major traditional sports are track and field (Cuba Jamaica, Bahamas, Trinidad);-football (Trinidad, Jamaica); cricket (Barbados, Jamaica, Trinidad, Guyana); boxing (Cuba, Jamaica, Puerto Rico); new ones such as swimming (Jamaica, Trinidad, Curacao), badminton (Jamaica); martial arts (Jamaica, Cuba)
- It has become a major economic activity in region, generating income for many individuals; avenue for economic linkages as apart from player/team there is need for managers, trainers, coaches, nutritionist, doctor, administrator, grounds men, hotels, vendors etc designer/manufacturers, psychologists, physiotherapists, transport,
- Enhance the physical well being of people. Physical, emotionally, psychological fitness; lead to awareness in healthy lifestyle...renewed interest in exercise, diet etc... improved health means reduction in health costs to countries/region as well as a healthier labour force (greater production)
- Enable individuals to improve educational opportunities at tertiary level through scholarships offered both locally to UWI, UTECH and GCFoster) as well as North America, Avenue for upward social mobility: world fame, status, income
- Promote Caribbean identity, pride, morale and esteem, life choices enlarged thus empowering of people
- Development of good citizens: - develop qualities in individuals such as team spirit, loyalty, camaraderie, dedication, flexibility, humility, discipline
- Promote regional integration through regional competitions (Carifta games, CNC, regional football etc; breaks down insularity as different nationals come to learn and appreciate way of life of others in region, cement lifelong friendship
- Contribute to the marketing of the region as tourist destination. Region is viewed by people around world when we host international competitions such as test matches, world netball championship, world junior games and when our teams visit other regions, media coverage includes culture of the region etc
- Enhance our presence on world scene especially at major sporting events such as World Netball Championship, Olympic games, Commonwealth games, Pan-American

icomwc coN7&&snoN TO &GWNM pevetypwur

Hosting international events such World Netball Championship, World Junior Games, World Cup Cricket, -Test Matches, -World Cup Football, CONCACAF," " '_Z... 1 ... ■ '

- Income earned by players are spent in the country
- Boosts local support services such as air and ground transport, hotels and catering establishments, food vendors, grounds men, security etc
- Governments earn taxes from income of individuals, consumption taxes, corporate taxes of those who earn from supporting activities
- Promote sport tourism - regional and international visitors- earn foreign exchange
- Mandates refurbishing/construction of sport stadia along modern and internationally accepted standards will encourage long term promotion of sports as facilities are on par with international standards thus continued economic rewards from holding sporting competitions.

- Increase physical education and sports budget of primary and secondary schools in the region
- Employ more qualified coaches in the schools; get more coaches certified /properly trained
- Sponsor more competitions thereby increasing interest of young people
- Offer incentives to teams which achieve good results in various sports
- Enter into agreements with foreign/local institutions to accept outstanding sportsmen'women
- Offer tax reduction incentives to businesses which sponsor sporting competitions
- Strengthen local sporting institutions thus bringing them up to international standards
- Forge government to government agreements as aid packages to Caribbean countries with educational training as the focus e.g. Cuba offering scholarship for training in boxing, field events, Jamaica offering assistance in track and field and netball etc

By so doing

- Life chances of individuals will be enhanced

tmpilU U €&cckh>d ZJbOK 100

- Skills bank of the region will be available
- Reduction in need for foreign expertise (save foreign exchange as salaries will stay in the region)
- Return of nationals will increase skills available to private and public sectors
- Nationals with new skills will establish enterprises which impact positively
- Skills of nationals drawn on by governments to act as advisors.

PV DK P€EFVim#WC£ M £?*>£?£ CAN

- Result in loss of sponsorship — businesses don't want to be identified with losing team
- Fans will lose interest and take their support to another sport
- Development of the game will suffer- decline in club membership can lead to* clubs folding up
- Scholarship for budding young stars will be reduced as sport becomes unattractive to sponsors
- Schools may drop sport from sports curriculum
- Indiscipline among young people may increase as sports instills discipline
- Positive presence on national. Regional or international level will be lost
- Create psychological problems which can affect performance

A&eeNC€ Of ?>JZOPSS\$WNAL \$PQZy\$ IN Ttf£ ESGWN W/E JO:

- Lack of resources: businesses involved in supplying equipment fail to specialize and so athlete not offered highest quality equipment; unavailability of proper facilities, athlete denied access to effective use because of 'day time commitment'
- Non-availability of information, research and reports to guide athlete on new trends and technology
- Little government support in facilitating development, provide facilities, budget and scholarship
- Inadequate sponsorship from private sector: need to participate through individual/team sponsorship, league/competition, incentive and awards, construction of facility';, supply of equipment and training workshops
- Lack of management and marketing skills: athletes need proper training, advice, and management so trainers, coaches, administrators and managers have role to play.

*ejttx&itt d 1*J C test-ist*i.4 r.firt*: mi*

These skills need to be provided to those in those capacities

- Lack of people support (spectator)
 - Weak economies in the region: private and public sectors have burden to establish and develop sports, cost is sizable and so poses a challenge so countries with weak economies will have extreme difficulty committing to the development of professional sports in region
 - Inadequate supply of trained coaches
 - Not enough media coverage: media will amplify spectator audience, bring sense of success and being to athlete, will play role to attract needed sponsorship
 - Few professional role models
- e Little understanding that players have to be nurtured from young age in sporting discipline

1900 London <i>Conference</i>	-*	Pan African <i>Congress</i> <i>Peris</i> 1919	U.N.I.A. 1914 (JA.)	West <i>Afnear</i> , Student Union 1920s (London)	
Harlem Renaissance (New York)		Necjrituce Movement (<i>France</i>)	Council on 'iccn Affair	African Student Organisction	
African independence 1957 - 1963)	H*	O. A. U. (1963)	-->>	Black Power movement (USA. 1960)	Civil Rights movement (USA 1960)

People movement, which developed outside of Africa during the 19th and early 20th century with the philosophy that African people (Continental or Diaspora) share common bonds and objectives and in order to achieve these goals they must be united. Achievement of this unity has been perceived in varying ways depending on the proponent, time and place. It refers to all black people, people of African descent, and people on the continent of Africa as well as all African states.

The formal concept developed as a reaction to European colonialism in Africa (European trade was accompanied by seizure of territories in order to gain control of the resources (physical and human) of the continent. Colonialism degraded Africans through inhumane slavery and scattering of its people across European colonies. Africans were indoctrinated through everyday contact and education with the idea that European culture was inherently superior to theirs. The resources of Africa were exploited and exported to Europe for the benefit of Europeans and not Africans. Slavery and colonialism were hated by Africans and people of African descent hence the Pan African movement. Continental Pan Africanism advocated the unity of states and people in Africa. On the other hand Diaspora Pan Africanism related to solidarity among all black Africans and peoples of African descent (a scattered, diverse and often disadvantaged population) outside the continent. The informal concept of Pan Africanism developed in the 19th century among intellectuals of African descent in the Caribbean and North America in response to Europeans /North American thought that human beings were of different races with distinct characteristics (Dubois, Delany and Blyden). The formal concept had its beginning at the start of the 20th century.

- Pan African Conference in London 1900 organized by Henry Williams (*Trinidadian*) to give black people the opportunity to discuss issues facing blacks around the world. It formed a protest against unequal treatment of blacks by British at home and in colonies; addressed need to uphold dignity of blacks; celebrated aspects of traditional African culture « Pan African Congress organized by W.E. Dubois (NAACP) in 1919 in Paris - expressed concern for plight of African soldiers who fought in WW1 as well as the status of Africans of German colonies captured by the Allies. Subsequent congresses were held in 1921, 1923 and 1927, each time with increased attendance.

- Universal Negro Improvement Association (UNIA) formed by *Garvey* 1914 for black pride, political and economic improvement for blacks and repatriation of blacks to Africa
- West African Students Union(WASU) formed in London in 1920s by young aggressive black students from Africa and Caribbean agitating for African independence from colonialism
- Harlem Renaissance (black cultural movement) disseminated works of black writers -*Mckay*, *Langston Hughes*, *Dubois* which espoused black pride and challenged racial injustices
 - » Negritude Movement(France) *IQCL* by French speaking African intellectuals and activists highlighted African civilization defending it against charges of African inferiority (*Aime Cesaire*, *Leopold Senghor*)
- Council on African Affairs (American) raised awareness of plight of Africans living under colonialism and advocated liberation of African colonies - *Paul Robeson*, *Dubois*, *Lena Home*
- African Student Organization (USA) formed by *Kwame Nkrumah* left for London linked up with *George Padmore*, *CLR James*, *Jomo Kenyatta*
- African independence: Ghana 1st sub Saharan state to gain independence led by *Nkrumah*. In 1960 17 countries gained independence and by 1963 80% of Africa was independent.
 - » Organization of African Unity (OAU) organization of independent African states committed to continent wide cooperation (1963)
- Black Power/black nationalism in US in the 1960s (re emergence of Pan Africanism) led by *Malcolm X* and stressed racial unity, self reliance, self determination and separatism like *Garvey* along with black dignity and consciousness
- Civil Rights Movement led by *Stokefy Carmichael* *MLKing* stressed self reliance and integration, somewhat like *Dubois*

Term coined by French West Indian Aime Cesaire (Martinican poet, playwright, and political leader) refers to the distinctive culture shared by Africans and all members of the African Diaspora. He believed that all of these peoples should be proud of their negritude, develop it, express it, and offer it to the world as part of the universal human heritage. At the same time, they should borrow the best of European civilization, being careful to "assimilate, not be assimilated." The movement developed in Paris among French-speaking African intellectuals and activists whose works affirmed the integrity of African civilization, defending it against charges of African inferiority. "Noted proponents of negritude included the authors Leopold Sedar Senghor (who later became the first president of Senegal), Aime Cesaire, Alioune Diop, and Leon-Gontran Damas.

The concept is rooted in the philosophical ideas of black orators and authors of the early 20th century (Garvey, Dubois, Langston Hughes, McKay). Henry Williams, chief organizer of the first Pan African congress in 1900, galvanized the growing voices into organizational action. Initial efforts came from educated middle class, which emerged after emancipation (Blyden, Robert Love, J J Thomas). English speaking West Indians became the precursors to the more institutional developments that characterized the 20th century. Negritude expresses re-vindication of the richness and value of the Black culture. The term was perceived as a psychological feat. It transformed the previously defeated black 'self' to a self-affirmation of human universality and dignity. For blacks in new world, their struggles to emerge from the stigma and strictures of slavery met with overt and covert racism. As a result they sought to analyse and articulate their condition. Blacks lacked clear and cohesive cultural identity. There was cultural retention but this was isolated rather than universal. Music, dances, culinary arts and oral traditions became the badge of identity as blacks were denied an education.

After WW II negritude developed into two divergent ways: one viewed genetic/biological formation while the other view emphasized cultural/historical formation. For black consciousness to develop universally it needed analysis, articulation and galvanization. The first congress in London signified the move towards unity. It brought Africans of the Diaspora and the continent together to foster fruitful relationship (Padmore and Nkrumah). Garvey created the largest mass organization of blacks around the world (UNIAV). He was concerned about the way blacks were perceived and projected in ('white') history books. He was convinced that historical distortion was a major dehumanizing

weapon against the blacks. This idea was later to be echoed by people like Frantz Fanon and Malcolm X.

Capitalism in its simplest terms means free market enterprise. It is a way of organizing the economy whereby the exchange of goods and sendees is done according to the forces of the market i.e. demand and supply. Modern view is that of free trade. Under a free trade system government has little say in the distribution of goods and services. The two major ideal of capitalism is privately owned capital and investment and profit making. British capitalism in the New World had one objective - profit making (get wealthy). The plantation system of production used African slave labour thereby making huge profits.. .in no time they became wealthy as evidenced by the plantation houses constructed across the region. The large profits accrued allowed them to live opulent lives in the Caribbean as well as Britain.

According to Walter Rodney (Guyanese) Capitalism was introduced into the Caribbean with the first transshipment of African slaves across the Atlantic. This form of capitalism was one-sided, in short this system was non-negotiable. It was non-negotiable because the Africans had no say in the system and also the fact that the system was forced upon the Africans (How *Europe Underdeveloped Africa* ,) Intellectuals Eric Williams and CLR James(Trinidadians) in their writings epitomized the thoughts of Caribbean people on British capitalism. Williams argued that slavery was purely economic and embodied the capitalist ideal of the British. Hence when slavery became unprofitable the British which once embraced this system deemed it savage and uneconomical and abandoned the system (*Capitalism and Slavery*). While Williams was able to recognize the brutality of the system of slavery he never lost sight of the fact that the system was economical and slavery was just another means to the economic success of the British..

CLR James in the *Black Jacobins* points out that the system of slavery and colonialism had to be brutal to ensure that the system of capitalism worked and worked well. The brutality was not only mental but also psychological. The Black West Indian was constantly reminded of his/her blackness and this blackness was closely linked to backwardness and inferiority. Over time blacks in the West Indies came to believe this myth. Once the myth was engrained into their psyche the British was ensured of the success of capitalism. British capitalism only involved the Caribbean to the extent that the position of

the Caribbean performed only to the needs of the British government. This forced arrangement was that the Caribbean produced and the British consumed. Whatever benefit was returned to the Caribbean was only done to ensure that capitalism survived to further enrich Britain.

This concept of development is attributed to St. Lucian economist Sir Arthur Lewis (Nobel Prize for Economics). This was based on a concept adopted in Puerto Rico called Operation Bootstrap. This concept became the model on which economies of the English speaking territories within the region were fashioned. Following economic systems such as communal, encomienda, slavery and the plantation system, many economists felt that for the Caribbean to be economically viable there was a need for the economy to be reorganized. After all, despite the many economic systems the region was still experiencing problems of an economic nature.

Industrialization by invitation was Sir Arthur Lewis' way of reorganizing the economies of the Caribbean. This intellectual thought hinged on "direct foreign investment" as industrialization was costly and therefore beyond the resources of the islands and that export promoting was too difficult for the region. He argued that in many developing countries there was a dual economy in the sense of a traditional and a more advanced sector. The traditional sector could supply abundant labour if the developed world supplied the capital for development. The model suggested the transformation of the Caribbean economies from a heavy emphasis on traditional subsistence agriculture to more modern, urbanized and industrially oriented economies. Lewis argued that for this process to take place there must be changes in the agrarian structures. These changes were to be in the form of a transformation of the sector from being peasant base to large plantation type production. Industrialization, he argued depends on improvement in agriculture and an economy in which agriculture is stagnant cannot show industrial development. Under this system, investors would be invited to set up industries in the Caribbean in return for favourable economic conditions from the governments of the region. Lewis theorized that this system would benefit both the investors and the country. In this relationship the investor provided financing, expertise, raw materials/equipment needed to run the industry. In return the country would provide personnel to work in the industry* land to locate the industry, tax holidays (period of non-payment of taxes or in words of Lewis "a period of wooing and fawning upon foreign

capitalists"), politically stable climate., proper air and sea ports (for import and export).

Three main weaknesses of Lewis' model have been identified. These are:

Q The assumption that the faster the rate of capital accumulation, the higher the growth of the rate of the modern sector and the faster the rate of job creation. Instead of job creation, capital could be invested in high tech, labour saving equipment resulting in technical unemployment, a The notion that surplus labour exists in rural areas while there is full employment in urban areas. Researches have shown the opposite. □ The model is Eurocentric and assumes that this model from Europe should be followed by all

Feminist is an advocate of woman's rights; anyone who recognizes female oppression and fights for the correction of this oppression. To be feminist is to be calling for **equality** of the sexes. Part of the feminist agenda is for women and their issues to be on the front burner; on centre stage. It concerns the celebration of women's achievement as for too long the contribution women have made to society has gone unnoticed, unrecorded and unrecognized. The origin of Caribbean feminism is unique due to its long history. Black women of the Caribbean have been fighting oppression ever since their sale and capture on the west coast of Africa. They were constantly in the quest for freedom.

Women used their bodies to attack the system of slavery- infanticide, and acts of infertility were common. When this was not the option they turned on the master and his property burnt fields, damaged equipment and animals, killed their masters. Under slavery women out of necessity became brutal and militant. In order to survive she had to become a feminist. Following emancipation, women's focus changed. They now had to struggle against the same black men, with whom they were enslaved, for visibility and equality. They had to find new tools with which to fight oppression. The new tools became academics and literature. If their voices are to be heard they had to become qualified like the men or more qualified. The views, issues and concerns became audible through literature. In the literature the women authors dramatized the different problems and complexities facing women they also attempted to deconstruct and reconstruct new ideas about women and femininity.

While doing so The achievements of women are being celebrated eg. Verene Shepherd uses her knowledge of history to refocus attention away from men in history. She has

'V-given women a voice and a face in history to women. One of the major inroads into Caribbean

feminism has been made by CAFRA (Caribbean Association for Feminist Research and Action). Through this group women are able to explore and celebrate their achievements. It provides a voice for women. In addition UWI appointed professor Rhynie regional coordinator of gender and development Studies. Through the Women and Development Unit (UWI) information about the status of women is made available to government and NGO, which can then be used to guide formulation of policy concerning the welfare of women. These many women's organization have been created to champion the cause; National Organisation of Women (Barbados) Sistren (Jam), CARIWA. These among others highlight role of women in many endeavours such as labour movement, provide a forum for discussion of issues and provide an inspiration for young v/aiuen, urge governments to implement legislations on women's issues such as rape, sexual harassment.

Amerindian groups have been targets of European opinions which saw them as a primitive, inferior, barbaric, uncivilized to be eliminated, overworked, enslaved. Caribbean Intellectual perspective seeks to dispel the view that these people did not have a history. (Walter Rodney (History of Guyanese working people); CLRJames (Black Jacobins) Hilary Beckles (Black Rebellion in Barbados). There is the need to view the indigenous people not only in terms of the labour they provided (encomienda) but the cultural contribution they have made. (Kalinago resisted Europeans and halted the advance of European settlement, left us architectural styles, foods, craft, farming systems)

Emancipation of slaves *led* to the introduction of indentured workers from Asia (Indian and China). Indians came in large numbers to Guyana, Trinidad and Cuba and to a much lesser extent Jamaica between in 19^m century. Influenced by contractual arrangements and colonialism, they have also produced several writings, which expressed their culture and responses within the Caribbean. In Caribbean they found harsh conditions (refer to indentureship; low wages, withholding of pay, overcrowded dilapidated unsanitary barracks, restricted movements, harsh penalties, poor nutrition, overwork disease. In response Indians protested, went on strikes, riots; others repatriated others cultivated plots practiced thrift and

industry, complained to immigration agents, created organizations such as East Indian

National Association in Trinidad, staged cultural activities such as Divali, Pbagwa, Hosay. The coming of the East Indians resulted in increase in East Indian population; even exceeding African population in Guyana and Trinidad. By 20th century they have made significant strides: moved from cane fields to education, commerce and health sectors, reversal in trend of illiteracy, higher paying jobs.

Although they have been associated with labour, the East Indians have showed their resilience to achieve economic independence and so have been able to influence the economies of the countries in which they have lived. In addition they have moved into areas of politics especially Trinidad and Guyana (Jagan, Panday, Jagdeo etc. Intellectual writers who have highlighted Indo- Caribbean thoughts include V.S. Naipaul (Nobel prize winner for Literature) and Samuel Selvon _J

Karl Marx concept based on his analysis of economic development, which was appearing in Europe due to industrial revolution (19th C). This concept appeared in *Communist Manifesto* 1848. In this he criticized the capitalist mode of production and the consequences for persons in those societies. (Review of capitalism: capital investment by a few for production of commodities with profit in mind) For Marx, this was unacceptable as it was based on exploitation of the masses (proletariat). He further analysed the situation to include the political structure within these capitalist societies. He contends that government, school church judiciary, values and beliefs systems will reflect ruling class ideology. Resulting from exploitation of the exploited he saw a struggle developing which will eventually change the society into communally owned property, no stratification, and sizable means of production. If change does not occur then there will be alienation (inequity and unequal distribution and treatment)

Within the Caribbean Michael Manley, Forbes Burnham, Maurice Bishop were influenced by Marxist/Neo-Marxist ideology and sought to implement policies that would create a just and equal society. (They had attended universities in Europe-England- where they were introduced to Marxist thoughts, had become disillusioned with the capitalist path of economic development, was influenced by the success of Cuban revolution) Democratic Socialism in Jamaica

Manley came to power in Jamaica in 1972 against background of popular social unrest, widespread call for social reform. Thought was that previous leaders did not do enough to

v*

help population who were trampled on by white middle class **domination and** exploitation.

Manley developed commitment **to social justice and equality. (Inequalities and inequity he saw through his work as a trade unionist). Manley embarked on nationalization programme**

- majority **shares** in transport sector, electricity and telephone

- bauxite **levy** on bauxite companies (increase revenue)

- **legislations** passed to protect vulnerable in society: family Court Act, Maternity leave **Act**, **Minimum** wage Act

Co-operate socialism in Guyana

After independence in 1966, Burnham adopted a socialist type of economic development in Guyana. Constitution was amended to reflect cooperative socialism. This type of governance opposed all social economic and political systems, which permitted exploitation of man by man. Wanted to extend socialist democracy to provide citizens with opportunity to participate in management and decision making process in **the** country (people **participation**) Burnham **nationalized** sugar, bauxite and communication sectors. Government then could **redistribute wealth** through social programmes (health education). Lack of financial resources made it difficult - had to turn to IMF **Socialism in Grenada**

In Grenada Maurice Bishop formed the New Jewel Movement to rid the country of **colonial** political thinking (Eric Gairy). Society was dominated by capitalist system of production Bishop **nationalized** banks, transportation and media, improved working conditions, health and education. Rejoined with other socialist states such as Cuba (got technical support to build airport and scholarships to study in Cuba). This proved **disastrous**

- heavy debt burden, internal conflict (murdered by members of his movement, invaded by USA)

t\$\$f/£\$ ©r \$©aAt 3fc£?t££

This concept is based on the idea that members of society regardless of race, creed, class, age, gender etc should have minimal guarantee to access the things/conditions that make for a decent living. These conditions include basic human rights such as fair trial, protection and fair treatment by the law, right to education, health care housing and decent standard of living. If these are not met then a breach of social justice has occurred. Social justice therefore deals with the recognition of the basic human rights of each person, a decent standard of living for all through access to education housing and health care and fair treatment in the legal system. All people are entitled to same basic rights and freedoms. It is connected to equality (treating everyone same way) and equity (fair treatment) Social justice in society is exemplified when there is harmonious relationship among all classes of society and where there is equal social and economic opportunities made available to all citizens regardless of race, colour, creed, age, sex or class.

One of the three aspects of social justice is natural right, which includes the basic rights of the person to life, protection of property and liberty. For social justice to be in operation then none of these rights must be infringed that's why governments have Bill of Rights entrenched in their national constitutions. The second aspect is mutual advantage, which follows up from natural rights. Here it is recognized that some level of inequality exists in all societies and for social justice to occur then everyone must benefit from opportunities available in the country. According to John Rawls (Theory of Social Justice") the distribution of wealth and income must be consistent with both the liberties and equal citizenship and equal opportunity". The third aspect is welfare. Governments are called upon to respond to the needs of the disadvantaged (homeless, elderly, poor, physically & mentally challenged, abandoned children) to ensure that they have access to the necessities of life - hence the creation of a ministry of social welfare. Social justice is manifested when there is harmonious relationship among all classes of society but based on history of the Caribbean (exploitation and inequality) there is still inconsistency in social justice-there is still discrimination. Social stratification manifests itself in unequal access (employment, education judiciary). Breaches of social justice will cause chain reactions, which affect the levels of social and economic equality, productivity and quality of life.

In the education system slow learners, disadvantage child and challenged students meet injustice. Each year thousands leave school with minimal qualification (refer to education articles CXC results). This will result in life changes, which contribute to marginalization. At the same time students with wealth or connections who do not perform well go on to live comfortable lives. The elderly in society are often times treated as if they are invisible. Very few institutions or organizations cater to their needs and wants giving the signal that they are not important to society. Society has forced them into early retirement — injustice because as long as one is alive they can contribute to the development of society. Physically/mentally challenged in society also face inequalities - education, transportation employment etc. Society has ignored them for the most part without catering to their natural rights and welfare yet they are capable of contributing to the development of society (Special Olympics athletes as a case) Some of the social justice issues may include

- © Gender: inequality in education and employment
- Minorities: Rastafarians, Maroons, Indigenous people
- Disabled: public amenities/ service, education, health care
- Elderly: geriatric care, recreation, pension, shelter © AIDS victims: employment, health care
- © Children: their rights and child labour
- © Street people: homelessness, employment, welfare
- © Class & Racial discrimination: police brutality, fair trial, employment etc

Research is a systematic process of collecting and analyzing data for a specific purpose (1 could be to : validate a theory, add new knowledge, solve a problem) It is systematic because it;

- Conceptualizes the research as a focused problem statement (this limits the problem)
- Employs a literature review (show how much insight and knowledge there is about issue)
- Utilizes some kind of sampling procedure (this ensures that persons with an input not excluded)
- One or more data collection strategies are used (usually well thought out methods which focus on issue/problem)
- Data analyzed statistically or content analysis method (to ensure findings are credible in relation to the data collected)
- Discussion of findings present justification for relevant factors (show how competing claims impact on issue being researched)
- Employs reporting format which utilizes various modes for transparency of process (text, graphs, tables, appendix)

1. Objectivity: this is both a procedure and a characteristic and refers to the quality the data produced based on collection and analysis procedures.(Objectives should be clear, determine relevance, provide a link to the research problem, establish sound information on the research problem)
2. Precision: use of technical and precise language; describes study accurately so that replication or extension may be done and the results used correctly.
3. Verification: results obtained may be confirmed or revised in subsequent research
4. Parsimonious explanation: reduce complex realities to simple explanations (i.e. Ockham's Razor)
5. Empiricism: guided by evidence obtained from systematic research rather than opinions
6. Logical reasoning: thinking process whether from general to specific (deductive) or specific to general (inductive)

7. **Conditional conclusions:** (implicit or explicit) bear in mind conclusions in research are not absolute hence use **of** terms such as "tend to indicate", "are suggestive"

1. **Select a general theme:** this defines the area in which research will be conducted
2. **Review the literature** on the theme (*Exhaustive literature*, review is done before one collects data, *preliminary literature review* is done before data collection and then expanded as data are collected). Literature review is important as it *provides background information* on the topic, it highlights *areas of disagreement and agreement* from previous research, highlights the *developments in the research* area, *highlights gaps in the research process* in relation to the topic, *provide information on how different aspects of the research* may be undertaken, maybe used to *establish the context and background* for the study. In essence Literature review informs about *prior research methods used*, can be used for *critique* as well as to *identify commonalities*. (Reviews need to be credible - should have author's name and credentials; journals/web sites should be credible (published on a regular basis, peer reviewed, have references/bibliography) Sources may include **internet, existing literature, newspaper reports, archives, minutes of meetings, oral histories**.
3. **Decide specific research problem/question/hypothesis:** having decided then a statement of the problem is done (60 words)
4. **Determine the design and methodology:** researcher decides v/hether *quantitative* or *qualitative* approach will be used and from whom data will be collected (*population: target/representative sample*), how the subjects (sample) are selected (*non- probability/probability: simple random or systematic/quasi-random, stratified, purposive, judgmental, dense, accidental, quota, snowballing*) and how data will be collected (*in-depth/structured interview, archival research, oral histories, observation(naturalistic/participant), minutes of meetings, survey (structured/unstructured interview)*),
5. Collect data: ethical and legal concerns regarding collection and analysis need to be resolved - privacy, confidentiality, consent (subject & parents) transparency.
6. Analyze and present data: *statistical treatment/chunk and code* usually summary visual representations (*tables, graphs/charts, text*)

7. **Interpret findings:** here you provide *suggestions* as to why the data presented is that way. What are the possible reasons for the responses received/trends in the responses? What meaning can be deduced from the responses/data/
8. **Discussion:** this involves making *connections!* *sznsz* out of the lit review and the data findings. Are there any commonalities, differences?
9. State generalizations/concbsioiis: what did your data project or show based on the hypothesis? Can these findings be generalized to the target population? *Summarize the findings.* What were the *limitations (time, word limit, slow response of sample population)* experienced? Were there any *new discovery/findings'*? What *recommendations (more research; qualitative/quantitative)* can you make?

Quantitative and Qualitative Paradigm

Quantitative Research

Uses numbers to express important findings findings

Treats numeric data with statistics

Applies pre-established design

Data comes from questionnaires (forced choice responses), experiments, observations

Accepts single or fixed reality

Applies deductive logic

Uses analytical thinking

Applies mechanic approach

Emphasizes rationality

Qualitative Research

Uses words to express important

Treats narrative data with chunk and code method

Applies emergent design

Data comes from interviews (open-ended questions), artifacts (including documents) and observations

Accepts multiple realities

Applies inductive logic

Uses synthetic thinking

Applies humanistic approach

Emphasizes rationality and intuition

Quantitative (contd.)

Accepts causal relationships

Usually has a hypothesis

Tends to use large sample

Selects sample randomly

Researcher is detached

Trusts clinical instruments

Tends to have context free generalizations

Tends to ask "How?"

Qualitative (contd.)

Accepts causal or teleological relationship

Usually has foreshadowed problems

Tends to use small sample

Selects sample purposefully

Researcher is immersed

Trusts professional judgment

Tends to have context bound generalizations

Tends to ask "Why"?

A sample is a part of a larger population and is usually selected to be representative of that population. Using a sample saves time and money. Sampling is a procedure in research of selecting a portion of the population under study to represent the entire population. This is done because the entire population is often too large for all members to be able to take part in the research

Random and systematic

These are simplest way to select from a large population. Here every person has an equal chance of being in the research... assign number to each and then select from a hat. Could also select a determined # pattern, like every 10 name on the list

Stratified random sampling

This involves the division of the sampling population into groups to ensure that the sample is representative of the group. This will allow researcher to control the variable -

Quota sampling allows researcher to control variables without having a sample frame.

Predetermined how many respondents with particular characteristics are to be questioned. This is ideal when study is based on a simple comparison of two groups. This is not truly random

and so results maybe distorted

Multistage sampling involves selected a sample from another sample **Snowballing** involves using personal contacts to build up a sample of the group

1VT&S Of T&SSfflCM

Archival studies

This is an examination of existing records of human activities. Researchers often examine old newspapers, medical records, birth certificates crime reports popular books artwork. They may also examine statistical trends of the past such as crime rates, birth rates, and employment rates. These are particular valuable for examining cultural or historical trends.

Case Studies

Sometimes researchers interview, test, observe and investigate the backgrounds of specific individuals in detail whenever there is the belief that an in-depth look at one individual will reveal something important about people in general. These take a long time to be completed and the results maybe be limited by the fact that the subject is atypical

Surveys

In contrast with in-depth study of one person, surveys describe a specific population or group of people, this involves asking people a series of questions about their behaviours, thoughts or opinions. Surveys can be conducted in person face to face, over the phone or through the mail. Rather than questioning every person in the population, survey researchers choose a representative sample of people and generalize the findings to the larger population. They need to be carefully designed and conducted to ensure their accuracy. The results ca be influenced and biased by two factors: who the respondents are and how^r the questions are asked. Sample must be representative of the population on key characteristics such as sex, race, age region and cultural background

Naturalistic observation

The researcher observes people as they behave in the real world. The researcher simply records what occurs and does not intervene in the situation. This tends to be used in anthropology and psychology

Co relational studies

These are designed to find statistical connections or correlations between variables so that some factor can be used to predict others. A correlation is a statistical measure of the extent to which variables are associated. A positive correlation exists when two variables increase or

V* decrease together. A negative correlation exists when increases in one variable are accompanied by decreases in the other or vice versa

OP A

By definition, a questionnaire is a list of preset questions for respondents to complete themselves. These questions may be of the open-ended type or the closed/pre coded type. The questionnaires can be used in a variety of ways depending on *who controls the situation* and the *level of interaction* between the researcher and the respondent.

- a group setting in the presence of the researcher - useful if there is a captive audience; high response rate, opportunity to explain questions
- » self completion without researcher: - time and cost are of essence in this type, large number of response in a short time but responses are likely to be lower, can't be sure of who answered the questions, can't ensure that informant answered all questions
- Face to face unstructured interview: opportunity to use more open-ended questions but this takes time.
- Telephone: can be done in the evenings, not possible to give show cards but not every one has a telephone thus creating bias in favour of the advantaged in society. Questionnaire is a practical way to collect data; it requires short period of time; little personal involvement; is easily quantified, analyzed more objectively and scientifically; is more reliable than qualitative and covers a large sample size

Structured: simply a questionnaire administered by an interviewer who read questions to respondent

Unstructured: the interviewer has no predetermined questions, allowing the conversation to develop naturally researcher needs to be nondirective (do not offer opinions) and must avoid approval/disapproval

A research proposal is a paper describing what the researcher intends to accomplish and the best way to do so. It should demonstrate an understanding of the entire research process. It serves as a guide for how conduct your study.

Background: This section explains the context in which the problem to be researched is discussed. Your aim is to provide arguments to support the need for the study and establish the need for further research.

identifying the problem and stating the research question: this is where you indicate what your hypothesis is or what question/questions you are setting out to seek an answer to. This is also a good point at which to define terms you will use. Defining your terms is especially important where they have specialist meanings that differ from general usage.

Purpose of the study: You will need to state clearly what you intend to achieve in this study. Remember that research is carried out for reasons that include clarification of the cause of a phenomenon you have observed, gathering information to inform decision or making a problem solving process or aid *m* the development of a theory that explains some phenomenon you have observed

Significance of the study: Being aware of previously conducted investigations will help you derive significance from the findings of your research. It is important to know how your findings will contribute to existing knowledge or practice.

Review of Literature: In this section, you will include any information you have found in your reading on the subject that supports your hypothesis. Sources of relevant information often include journal articles, reports from government and international organizations. Reading any of these will help you to identify important concepts that may arise from time to time during your research

Design of the study: Looking at other studies that have been done in your area of interest can help you in designing, your study as well as support your choice of methodology. Your research question will determine the kind of information you need and the type of investigation and sources of data you will chose. In describing your study design you will indicate whether you are doing a case study, action research, a survey etc.

Participants and location: Participants are often referred to as the subjects or the sample population/group. In this section you will indicate who will be investigated in your study and the location where the study will take place. Say how participants will be selected and

describe the kind of setting **in** which you **will** make your observations or conduct your interviews (if these are relevant)

Data collection sources: In this section you will specify all the sources (primary and secondary) that from which you obtained data". You should describe the sources i.e. primary source (people surveyed or interviewed) by giving demographics such as age, sex, education level, socio-economic status, occupation etc. for secondary source, indicate whether it is book, newspaper, journals, magazine, internet. For each indicate the title of the article/book, the author and the credential of the author.

Timetable and costs: Include a time line for completing the project and an itemized estimate cost. Make your timetable realistic and stick to it. Meeting with your teacher should be structured around this

Analysis of data: Once you have collected all this data, how do you analyze it? How will you make sense out of the evidences you collect? How you interpret that data will determine how you answer your research questions. You should indicate what comparisons you intend to examine.

mwc\$L gggj/gg

Researchers often do encounter ethical problems or dilemmas in conducting research. Some of the following are concerns of researchers:

1. What harm if any is the research likely to bring participants? Does knowledge gained justify risks involved?
2. Is the privacy of subjects being invaded and should privacy be maintained under all circumstances?
3. Do subjects have a right to be informed that they are being studied? Is their consent necessary?
4. Does it matter how the research results will or can be applied? Should this affect the research design or the way the research is reported?
5. When, if at all, is deception in conducting research or in reporting the research results justified?

American Sociological Association recommends that the researcher:

- tells prospective subjects what they will experience so they can give informed consent to participate
- instructs subjects that they may withdraw from the study at anytime
- » minimizes all harm and discomfort to the respondents
- * keeps the subjects' responses and behaviour confidential
- « debriefs subjects who were deceived in some way by fully explaining the research after they have participated.

Bibliography refers to the list of material read but were not necessarily used in the study. This is to be presented in alphabetical order. Reference refers to the list of material actually used in the study. Bibliography/Reference must be given so that:

- * Charges of plagiarism (literary and intellectual theft) are not brought against the researcher.
- » Those assessing your work can distinguish what is yours and what you have taken from elsewhere.
- Other readers/future research students can follow up your sources.

Caribbean Studies uses the APA System of bibliography as follows

- « Double spacing between entries
- * Single spacing within an entry if more than one line

Books

Author's name. (date). Title. City: publisher e.g.

Beckford, E. (2005). Caribbean Studies for 6th Formers. Malvern: JJPublishers

Newspapers:

Author (date). Title. Newspaper. Page.

Journals:

Author, (date), title. Journal. Volume (issue), page

No authors:

title.(date). City: publisher

Organisation/institution as author:

Organization (date), title. City: publisher

Editor/complier as author:

Name. (Ed.).(date) title. City: publisher

This contains material the researcher considers to be of utmost importance to the research carried out. May include

- » copy of the questionnaire used
- transcripts of interviews conducted
- data which would be cumbersome within the data presentation ©
statistical table/chunk and code method
- additional pictures/ maps etc

Each item in appendix is to be labeled individually - APPENDIX A, B, C, etc

Action research: a small scale intervention /activity carried out in order to examine its effects. It is usually concerned with solving a problemor understanding more about the problem.

Appendix. Supplementary material at the end of a text

Case study. An examination of a specific entity- classroom, an event programme. The researcher usually takes a qualitative approach(participant observation/interviews)

Data. Information collected systematically in research

Dependent variable. Change or difference in behaviour that occurs as a result of the independent variable- the effect/outcome

Descriptive research. Describes and interprets what is; concerned with conditions or relationships that exist

empirical. Relating to the process of directly observing, recording/monitoring situation .

*generalizability. The degree to which the results of a study apply to a larger population

generalization. Proposition asserting something to be true to for all members of an indefinite ..
part of that class

hypothesis. Tentative, reasonable, testable explanation, for the occurrence of certain
behaviour/event

Independent variable. Activity/characteristic believed to make a difference with respect to

some behavior/ the cause and treatment

Extraneous. Aspect of study that the researcher knows may negatively affect the

generalizability of the results but over which he/she has no control.

Primary data. Information obtained from persons who witnessed an event. Testimony,

original document (written by someone who was at the scene), relic Random sampling. Process of
selecting a sample in such a way that all individuals have a

fair chance of being selected Research design. Selecting sample, measuring outcomes,

analyzing data for purpose of

answering research question

Sample. Number of individuals selected from a population for a study survey. An attempt to

collect data from members of a population in order to determine the current status of the
population with respect to a variable

Validity. Degree to which a test measures what it is intended to measure Variable. The factor

entity or group that a researcher wants information on, especially how

one set of variables interacts with other variables.
